

**Inference Rule 1** (*Liu*) Let  $\mathbb{X}$  and  $\mathbb{Y}$  be two concepts. Assume a rule “if  $\mathbb{X}$  is an uncertain set  $\xi$  then  $\mathbb{Y}$  is an uncertain set  $\eta$ ”. From  $\mathbb{X}$  is an uncertain set  $\xi^*$  we infer that  $\mathbb{Y}$  is an uncertain set

$$\eta^* = \eta|_{\xi^* \triangleright \xi} \quad (1)$$

which is the conditional uncertain set of  $\eta$  given  $\xi^* \triangleright \xi$ . The inference rule is represented by

$$\frac{\begin{array}{l} \text{Rule: If } \mathbb{X} \text{ is } \xi \text{ then } \mathbb{Y} \text{ is } \eta \\ \text{From: } \mathbb{X} \text{ is } \xi^* \end{array}}{\text{Infer: } \mathbb{Y} \text{ is } \eta^* = \eta|_{\xi^* \triangleright \xi}} \quad (2)$$

*Uncertainty Theory* Baoding Liu, 2014-11-03 When no samples are available to estimate a probability distribution we have to invite some domain experts to evaluate the belief degree that each event will happen Perhaps some people think that the belief degree should be modeled by subjective probability or fuzzy set theory However it is usually inappropriate because both of them may lead to counterintuitive results in this case In order to rationally deal with belief degrees uncertainty theory was founded in 2007 and subsequently studied by many researchers Nowadays uncertainty theory has become a branch of axiomatic mathematics for modeling belief degrees This is an introductory textbook on uncertainty theory uncertain programming uncertain statistics uncertain risk analysis uncertain reliability analysis uncertain set uncertain logic uncertain inference uncertain process uncertain calculus and uncertain differential equation This textbook also shows applications of uncertainty theory to scheduling logistics networks data mining control and finance

Probabilistic Logic Networks Ben Goertzel, Matthew Iklé, Izabela Freire Goertzel, Ari Heljakka, 2008-12-16 Abstract In this chapter we provide an overview of probabilistic logic networks PLN including our motivations for developing PLN and the guiding principles underlying PLN We discuss foundational choices we made introduce PLN knowledge representation and briefly introduce inference rules and truth values We also place PLN in context with other approaches to uncertain inference

1.1 Motivations This book presents Probabilistic Logic Networks PLN a systematic and pragmatic framework for computationally carrying out uncertain reasoning reasoning about uncertain data and or reasoning involving uncertain conclusions We begin with a few comments about why we believe this is such an interesting and important domain of investigation First of all we hold to a philosophical perspective in which reasoning properly understood plays a central role in cognitive activity We realize that other perspectives exist in particular logical reasoning is sometimes construed as a special kind of cognition that humans carry out only occasionally as a deviation from their usual intuitive emotional pragmatic sensorimotor etc modes of thought However we consider this alternative view to be valid only according to a very

limited definition of logic Construed properly we suggest logical reasoning may be understood as the basic framework underlying all forms of cognition including those conventionally thought of as illogical and irrational
