Trends in Theoretical Computer Science Egon Börger, 1988 **Mathematical Foundations of Computer Science 1994** Igor Privara, Branislav Rován, 1994-08-03 This volume constitutes the proceedings of the 19th International Symposium on Mathematical Foundations of Theoretical Computer Science MFCS 94 held in Kosice Slovakia in August 1994 MFCS 94 brought together specialists in theoretical fields of computer science from various countries in order to stimulate mathematical research in theoretical computer science Besides 12 papers based on invited talks by renowned experts the book contains 42 research contributions selected from a total of 112 submissions All areas of theoretical computer science are presented some from a particular mathematical point of view *Quantifiers: Logics, Models and Computation* Michal Krynicki, M. Mostowski, L.W. Szczerba, 2013-04-09 *Quantifiers Logics Models and Computation* is the first concentrated effort to give a systematic presentation of the main research results on the subject since the modern concept was formulated in the late 50s and early 60s The majority of the papers are in the nature of a handbook All of them are self contained at various levels of difficulty The Introduction surveys the main ideas and problems encountered in the logical investigation of quantifiers The Prologue written by Per Lindström presents the early history of the concept of generalised quantifiers The volume then continues with a series of papers surveying various research areas particularly those that are of current interest Together they provide introductions to the subject from the points of view of mathematics linguistics and theoretical computer science The present volume has been prepared in parallel with *Quantifiers Logics Models and Computation Volume Two Contributions* which contains a collection of research papers on the subject in areas that are too fresh to be summarised The two volumes are complementary For logicians mathematicians philosophers linguists and computer scientists Suitable as a text for advanced undergraduate and graduate specialised courses in logic **Logic, Computation and Rigorous Methods** Alexander Raschke, Elvinia Riccobene, Klaus-Dieter Schewe, 2021-06-04 This Festschrift was published in honor of Egon Börger on the occasion of his 75th birthday It acknowledges Prof Börger's inspiration as a scientist author mentor and community organizer Dedicated to a pioneer in the fields of logic and computer science Egon Börger's research interests are unusual in scope from programming languages to hardware architectures software architectures control systems workflow and interaction patterns business processes web applications and concurrent systems The 18 invited contributions in this volume are by leading researchers in the areas of software engineering programming languages business information systems and computer science logic **The Foundational Debate** Werner DePauli-Schimanovich, Eckehart Köhler, F. Stadler, 2013-03-14 Constructibility and complexity play central roles in recent research in computer science mathematics and physics For example scientists are investigating the complexity of computer programs constructive proofs in mathematics and the randomness of physical processes But there are different approaches to the explication of these concepts This volume presents important research on the state of this discussion especially as it refers to quantum

mechanics This foundational debate in computer science mathematics and physics was already fully developed in 1930 in the Vienna Circle A special section is devoted to its real founder Hans Hahn referring to his contribution to the history and philosophy of science The documentation section presents articles on the early Philipp Frank and on the Vienna Circle in exile Reviews cover important recent literature on logical empiricism and related topics *Computer Science Logic* Egon Börger, Yuri Gurevich, Karl Meinke, 1994 This volume contains the final versions of a collection of papers presented at the Annual Conference of the European Association for Computer Science Logic CSL 93 held at Swansea UK in September 1993 The 21 full papers included were selected from a total of 62 submissions and essentially contribute to the whole area of computer science logic research They are devoted to such topics as set constraints lambda calculi process algebras program semantics intuitionistic logics fixed point logics the equivalence problem Horn clauses quantifiers and proof transformations PUBLISHER S WEBSITE *Computer Science Logic*, 1993 [Mathematical Foundations of Computer Science](#), 1994

Developments in Language Theory Sang-Ki Ko, Florin Manea, 2025-08-16 This LNCS conference volume constitutes the proceedings of the 29th International Conference on Developments in Language Theory DLT 2025 in Seoul South Korea in August 2025 The 18 full papers and 2 invited papers included in this book were carefully reviewed and selected from 38 submissions They presented current developments in formal languages and automata Its scope is very general and includes among others the following topics and areas grammars acceptors and transducers for words trees and graphs algebraic theories of automata algorithmic and many more **Current Trends in Theoretical Computer Science** Grzegorz Rozenberg, Arto Salomaa, 1993 The book is a very up to date collection of articles in theoretical computer science written by leading authorities in the field The topics range from algorithms and complexity to algebraic specifications and from formal languages and language theoretic modeling to computational geometry The material is based on columns and articles that have appeared in the EATCS Bulletin during the past two to three years Although very recent research is discussed the largely informal style of writing makes the book accessible to readers with little or no previous knowledge of the topics
