Baseball/Literature/Culture Peter Carino,2004-04-02 Since 1995 the Indiana State University Conference on Baseball in Literature and American Culture has provided a venue for scholars to present their research on baseball as literary subject matter and cultural institution Nineteen essays presented at the 2002 and 2003 ISU conferences are published in this work

The essays demonstrate that baseball continues to engage scholars like no other sport despite the game's supposed loss of stature as the national game. A Field of Questions W. P. Kinsella comes to Ithaca reveals Kinsella as baseball fan and baseball writer. You don't play the angles you're a sap John Sayles Eliot Asinof Baseball Labor and Chicago in 1919 examines Sayles' Eight Men Out in the context of both Asinof's historical account of the fix and Sayles' earlier and openly labor-oriented film Maetwan Is Baseball an American Religion considers three codified sociological definitions of religion and demonstrates that to claim baseball is an American religion requires more than just a strong attraction to the game. Baseball Immortals Character and Performance On and Off the Field analyzes how character and performance impact fan and media perceptions as well as in terms of a player's candidacy for the Hall of Fame. These are just a few of the essays which cover a broad range of topics and take a variety of approaches to those topics.

Readings in Machine Learning Jude W. Shavlik, Thomas Glen Dietterich, 1990. The ability to learn is a fundamental characteristic of intelligent behavior. Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s. The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science, engineering, and business. Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn. The editors, in cooperation with a group of expert referees, have chosen important papers that empirically study, theoretically analyze, or psychologically justify machine learning algorithms. The papers are grouped into a dozen categories, each of which is introduced by the editors.

Discovery Science Jean-Francois Boulicaut, Michael R. Berthold, Tamás Horváth, 2008-10-09. It is our pleasure to present the proceedings of Discovery Science 2008, the 11th International Conference on Discovery Science held in Budapest, Hungary, October 13-16, 2008. It was co-located with ALT 2008, the 19th International Conference on Algorithmic Learning Theory, whose proceedings are available in the twin volume LNAI 5254. This combination of DS and ALT conferences has been successfully organized each year since 2002. It provides a forum for researchers working on many different aspects of scientific discovery. Indeed, ALT/DS 2008 covered both the possibility to automate part of the scientific discovery and the necessary support to the human process of discovery in science. Interestingly, this co-location also provided the opportunity for an exciting joint program of tutorials and invited talks. The number of submitted papers was 58, i.e., slightly more than the previous year. The Program Committee members were involved in a rigorous selection process based on three reviews per paper. At the end, we selected 26 long papers, thanks to the recommendations of the experts based on relevance, novelty, significance, technical quality, and clarity. Although some short papers were submitted, none of them was selected.

Conference on Probability and Statistics in Atmospheric Sciences, **Readings in Knowledge Acquisition and Learning** Bruce G. Buchanan, David C. Wilkins, 1993.
