Statistical Techniques in Geographical Analysis Gareth Shaw, Dennis Wheeler, 1994 The second edition of this widely used undergraduate textbook is shorter than its predecessor but now contains a thorough treatment of computational methods It aims to cover degree students needs in statistical methods from their first to final years Assuming no more than basic secondary or high school mathematics the authors provide coverage of a range of techniques from simple descriptive to parametric and non parametric methods in bivariate and multivariate settings Almost invariably each technique is introduced manually followed up by the appropriate application using either the SPSS or MINITAB software packages the two statistical packages most widely used by geographers Topics are introduced in an orderly sequence reinforced by worked examples so that the book can be equally valuable as part of a teaching scheme as an aid in distance learning or as an accessible reference source on the different techniques

Multivariate Statistical Analysis in Geography SAGE Publications, Limited, 2009-12-30

An Introduction to Statistical Problem Solving in Geography Arthur J. Lembo, Jr., J. Chapman McGrew, Jr., 2023-10-27 The fourth edition of *An Introduction to Statistical*

Problem Solving in Geography continues its standing as the definitive introduction to statistics and quantitative analysis in geography. Assuming no reader background in statistics, the authors lay out the proper role of statistical analysis and methods in human and physical geography. They delve into the calculation of descriptive summaries and graphics to explain geographic patterns and use inferential statistics: parametric and nonparametric to test for differences (t tests, ANOVA, relationships, regression and correlation) and spatial statistics (point and area patterns, spatial autocorrelation). This edition introduces more advanced topics including logistic regression, two factor ANOVA and spatial estimation (inverse distance weighting, Kriging). Many chapters also include thought provoking discussions of statistical concepts as they relate to the COVID 19 pandemic. Maintaining an exploratory and investigative approach throughout, the authors provide readers with real world geographic issues and more than 50 map examples. Concepts are explained clearly and narratively without oversimplification. Each chapter concludes with a list of major goals and objectives. An epilogue offers over 150 open ended geographic situations inviting students to apply their new statistical skills to solve problems currently affecting our world.
