Use Cases Requirements In Context:

Use Cases Daryl Kulak, Eamonn Guiney, 2004 This edition describes a process based on employing use cases to gather and define software requirements Use cases roughly defined involve the process of figuring out exactly how end users will use a software system when it is completed before coding begins Both the process and its presentation have been thoroughly revised based on the authors more recent consulting experience and on feedback gathered from readers of the first edition over the past three years *Handbook of Systems Engineering and Management* Andrew P. Sage, William B.

Rouse, 2014-12-31 The trusted handbook now in a new edition This newly revised handbook presents a multifaceted view of systems engineering from process and systems management perspectives It begins with a comprehensive introduction to the subject and provides a brief overview of the thirty four chapters that follow This introductory chapter is intended to serve as a field guide that indicates why when and how to use the material that follows in the handbook Topical coverage includes systems engineering life cycles and management risk management discovering system requirements configuration management cost management total quality management reliability maintainability and availability concurrent engineering standards in systems engineering system architectures systems design systems integration systematic measurements human supervisory control managing organizational and individual decision making systems reengineering project planning human systems integration information technology and knowledge management and more The handbook is written and edited for systems engineers in industry and government and to serve as a university reference handbook in systems engineering and management courses By focusing on systems engineering processes and systems management the editors have produced a long lasting handbook that will make a difference in the design of systems of all types that are large in scale and or scope

Convergence and Hybrid Information Technology Geuk Lee, Daniel Howard, Dominik Ślęzak, 2011-09-13 This book constitutes the refereed proceedings of the 5th International Conference on Convergence and Hybrid Information Technology ICHIT 2011 held in Daejeon Korea in September 2011 The 94 revised full papers were carefully selected from 323 initial submissions The papers are organized in topical sections on communications and networking intelligent systems and applications sensor network and cloud systems information retrieval and scheduling hardware and software engineering security systems robotics and RFID Systems pattern recognition image processing and clustering data mining as well as human computer interaction **Developing Networks using Artificial Intelligence** Haipeng Yao, Chunxiao Jiang, Yi

Qian, 2019-04-26 This book mainly discusses the most important issues in artificial intelligence aided future networks such as applying different ML approaches to investigate solutions to intelligently monitor control and optimize networking The authors focus on four scenarios of successfully applying machine learning in network space It also discusses the main challenge of network traffic intelligent awareness and introduces several machine learning based traffic awareness algorithms such as traffic classification anomaly traffic identification and traffic prediction The authors introduce some ML

approaches like reinforcement learning to deal with network control problem in this book Traditional works on the control plane largely rely on a manual process in configuring forwarding which cannot be employed for today's network conditions To address this issue several artificial intelligence approaches for self learning control strategies are introduced In addition resource management problems are ubiquitous in the networking field such as job scheduling bitrate adaptation in video streaming and virtual machine placement in cloud computing Compared with the traditional with box approach the authors present some ML methods to solve the complexity network resource allocation problems Finally semantic comprehension function is introduced to the network to understand the high level business intent in this book With Software Defined Networking SDN Network Function Virtualization NFV 5th Generation Wireless Systems 5G development the global network is undergoing profound restructuring and transformation However with the improvement of the flexibility and scalability of the networks as well as the ever increasing complexity of networks makes effective monitoring overall control and optimization of the network extremely difficult Recently adding intelligence to the control plane through AI ML become a trend and a direction of network development This book's expected audience includes professors researchers scientists practitioners engineers industry managers and government research workers who work in the fields of intelligent network Advanced level students studying computer science and electrical engineering will also find this book useful as a secondary textbook
