The thesis is within the field of cognitive science, set within the domains of situated cognition and mediated action, with a focus on mediation in Human-Computer Interaction (HCI). It discusses cognition in relation to users, Intelligent Virtual Agents (IVAs), and the interaction environment. The perspectives and actions of users (humans) significantly influence the course of the interaction. IVAs, as mediators, facilitate interactions between users and their environments. As agents, they actively engage with users, influencing their decisions and behaviours. User involvement in the design process is important for the design of interactive systems. When properly implemented, using the correct methods, principles, and techniques, can lead to the development of systems that are effective, efficient, and satisfying to use. IVA research has shown a lack of user participation methodologies in the design process. The design of IVAs often focuses on individual elements and not the IVA as an integrated whole. As a result, these design insights do not easily convert into actionable guidelines. User involvement is primarily seen during the evaluation phase. This leads to the purpose of looking at the design of interactive interfaces of embodied agents, virtual and physical, set in social interactive spaces by involving the users in the conceptual generation and prototyping phase. The research questions are: How can we design interactive virtual agents for social interactive spaces? and How can we apply human-centred design methods to develop interactive virtual agents for social interactive spaces? Two case studies, a virtual receptionist for a university department and a reading robot BookBot for fourth-grade pupils, are conducted. Each case study involved a concept generation and prototyping phase with the users, using human-centred design (HCD) methods and tools. Prototypes were developed based on the conceptual phase findings and evaluated with the users. One key contribution is the application of HCD methodologies in the design of IVAs within social interactive spaces. This includes considerations of the context of interaction, mediation patterns, and the spaces of interaction. Another contribution is the introduction of novel design approaches, solution features, and competencies that designers should have when designing IVAs in social interactive spaces. The thesis presents exemplars of IVAs in these spaces.

Avhandlingen ligger inom området kognitiv vetenskap med fokus på situationerad kognition och medierad handling inom Human-Computer Interaction (HCI). Den diskuterar kognition i relation till användare, intelligenta virtuella agenter (IVAs) och interaktionsmiljön. Användarnas perspektiv och handlingar påverkar i hög grad interaktionens förlopp. IVAs som medlare underlättar interaktioner mellan användare och deras miljöer. Som agenter engagerar de sig aktivt med användare och påverkar deras beslut och beteenden. Användarinvolvering i designprocessen är viktig för utformningen av interaktiva system. När den genomförs korrekt med rätt metoder, principer och tekniker kan den leda till utveckling av system som är effektiva, ändamålsenliga och tillfredsställande för användarna. Forskning om IVAs har visat en
