Statistical Software Engineering National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Panel on Statistical Methods in Software Engineering, 1996-03-15 This book identifies challenges and opportunities in the development and implementation of software that contain significant statistical content While emphasizing the relevance of using rigorous statistical and probabilistic techniques in software engineering contexts it presents opportunities for further research in the statistical sciences and their applications to software engineering It is intended to motivate and attract new researchers from statistics and the mathematical sciences to attack relevant and pressing problems in the software engineering setting It describes the big picture as this approach provides the context in which statistical methods must be developed The book's survey nature is directed at the mathematical sciences audience but software engineers should also find the statistical emphasis refreshing and stimulating It is hoped that the book will have the effect of seeding the field of statistical software engineering by its indication of opportunities where statistical thinking can help to increase understanding productivity and quality of software and software production

Simple Statistical Methods for Software Engineering C. Ravindranath Pandian, Murali Kumar, 2015-05-21 Although there are countless books on statistics few are dedicated to the application of statistical methods to software engineering Simple Statistical Methods for Software Engineering Data and Patterns fills that void Instead of delving into overly complex statistics the book details simpler solutions that are just as effective and connect with

Statistical Methods in Software Engineering Nozer D. Singpurwalla, Simon P. Wilson, 2012-12-06 This preface pertains to three issues that we would like to bring to the attention of the readers our objectives our intended audience and the nature of the material We have in mind several objectives The first is to establish a framework for dealing with uncertainties in software engineering and for using quantitative measures for decision making in this context The second is to bring into perspective the large body of work having statistical content that is relevant to software engineering which may not have appeared in the traditional outlets devoted to it Connected with this second objective is a desire to streamline and organize our own thinking and work in this area Our third objective is to provide a platform that facilitates an interface between computer scientists and statisticians to address a class of problems in computer science It appears that such an interface is necessary to provide the needed synergism for solving some difficult problems that the subject poses Our final objective is to serve as an agent for stimulating more cross disciplinary research in computer science and statistics To what extent the material here will meet our objectives can only be assessed with the passage of time Our intended audience is computer scientists software engineers and reliability analysts who have some exposure to probability and statistics Applied statisticians interested in reliability problems are also a segment of our intended audience

Statistical Software Engineering, 1998 This report spotlights problem areas in software engineering to which the application of modern statistical methodology can be fruitfully

applied It was produced by an expert cross disciplinary National Research Council panel The panel deliberated discussed and made recommendations based upon their experience and on information gathered at a two day public forum at which there were presentations by 12 software and industrial engineers scientists and statisticians The most important findings are What is needed to address the challenge of cost effectively building huge high quality software systems is productive interactions between software engineers and statisticians Essential catalysts for this interactions include Following a collaborative model that partners statisticians software engineers and a REAL software process or product following a model for data collection and analysis that ensures availability of high quality data for statistical approaches to software engineering issues and paying attention to relevant issues in education such as in the areas of designed experiments exploratory data analysis modeling risk analysis attitudes toward assumptions visualization and statistical computing tools Statistical Software Engineering National Research Council, Division on Engineering and Physical Sciences, Commission on Physical Sciences, Mathematics, and Applications, Panel on Statistical Methods in Software Engineering, 1996-04-15 This book identifies challenges and opportunities in the development and implementation of software that contain significant statistical content While emphasizing the relevance of using rigorous statistical and probabilistic techniques in software engineering contexts it presents opportunities for further research in the statistical sciences and their applications to software engineering It is intended to motivate and attract new researchers from statistics and the mathematical sciences to attack relevant and pressing problems in the software engineering setting It describes the big picture as this approach provides the context in which statistical methods must be developed The book s survey nature is directed at the mathematical sciences audience but software engineers should also find the statistical emphasis refreshing and stimulating It is hoped that the book will have the effect of seeding the field of statistical software engineering by its indication of opportunities where statistical thinking can help to increase understanding productivity and quality of software and software production **Innovations in Software Engineering for Defense Systems** Oversight Committee for the Workshop on Statistical Methods in Software Engineering for Defense Systems, Committee on Applied and Theoretical Statistics, Committee on National Statistics, Division on Engineering and Physical Sciences, Division of Behavioral and Social Sciences and Education, National Research Council, 2003-10-06 Recent rough estimates are that the U S Department of Defense DoD spends at least 38 billion a year on the research development testing and evaluation of new defense systems approximately 40 percent of that cost at least 16 billion is spent on software development and testing There is widespread understanding within DoD that the effectiveness of software intensive defense systems is often hampered by low quality software as well as increased costs and late delivery of software components Given the costs involved even relatively incremental improvements to the software development process for defense systems could represent a large savings in funds And given the importance of producing defense software that will carry out its intended function relatively small improvements to the quality of defense software systems

would be extremely important to identify DoD software engineers and test and evaluation officials may not be fully aware of a range of available techniques because of both the recent development of these techniques and their origination from an orientation somewhat removed from software engineering i e from a statistical perspective The panel s charge therefore was to convene a workshop to identify statistical software engineering techniques that could have applicability to DoD systems in development

Measuring the Software Process William A. Florac, Anita D. Carleton, 1999-07-15 While it is usually helpful to launch improvement programs many such programs soon get bogged down in detail They either address the wrong problems or they keep beating on the same solutions wondering why things don t improve This is when you need an objective way to look at the problems This is the time to get some data Watts S Humphrey from the Foreword This book drawing on work done at the Software Engineering Institute and other organizations shows how to use measurements to manage and improve software processes The authors explain specifically how quality characteristics of software products and processes can be quantified plotted and analyzed so the performance of software development activities can be predicted controlled and guided to achieve both business and technical goals The measurement methods presented based on the principles of statistical quality control are illuminated by application examples taken from industry Although many of the methods discussed are applicable to individual projects the book s primary focus is on the steps software development organizations can take toward broad reaching long term success The book particularly addresses the needs of software managers and practitioners who have already set up some kind of basic measurement

process and are ready to take the next step by collecting and analyzing software data as a basis for making process decisions and predicting process performance Highlights of the book include Insight into developing a clear framework for measuring process behavior Discussions of process performance stability compliance capability and improvement Explanations of what you want to measure and why and instructions on how to collect your data Step by step guidance on how to get started using statistical process control If you have responsibilities for product quality or process performance and you are ready to use measurements to manage control and predict your software processes this book will be an invaluable resource **Applied Statistics for Software Managers** Katrina Maxwell,2002 Applied Statistics for Software Managers is the first complete guide to using statistical techniques to solve specific software development and maintenance problems You don t need a mathematical background Katrina Maxwell presents an easy to follow methodology and detailed case studies that show you exactly how to assess productivity time to market development costs maintenance cost drivers and more **Measuring the Software Process** William A.
