Williams,2012-10-01 Open publication This volume brings together contributors from cognitive psychology theoretical and applied linguistics as well as computer science in order to assess the progress made in statistical learning research and to determine future directions An important objective is to critically examine the role of statistical learning in language acquisition While most contributors agree that statistical learning plays a central role in language acquisition they have differing views This book will promote the development of the field by fostering discussion and collaborations across disciplinary boundaries

Neoconstructivism Scott Johnson,2010 Arguments over the developmental origins of human knowledge are ancient founded in the writings of Plato Aristotle Descartes Hume and Kant They have also persisted long enough to become a core area of inquiry in cognitive and developmental science Empirical contributions to these debates however appeared only in the last century when Jean Piaget offered the first viable theory of knowledge acquisition that centered on the great themes discussed by Kant object space time and causality The essence of Piaget s theory is constructivism The building of concepts from simpler perceptual and cognitive precursors in particular from experience gained through manual behaviors and observation The constructivist view was disputed by a generation of researchers dedicated to the idea of the competent infant endowed with knowledge say of permanent objects that emerged prior to facile manual behaviors Taking this possibility further it has been proposed that many fundamental cognitive mechanisms reasoning event prediction decision making hypothesis testing and deduction operate independently of all experience and are in this sense innate The competent infant view has an intuitive appeal attested to by its widespread popularity and it enjoys a kind of parsimony It avoids the supposed philosophical pitfall posed by having to account for novel forms of knowledge in inductive learners But this view leaves unaddressed a vital challenge to understand the mechanisms by which new knowledge arises This challenge has now been met The neoconstructivist approach is rooted in Piaget s constructivist emphasis on developmental mechanisms yet also reflects modern advances in our understanding of learning mechanisms cortical development and modeling This book brings together for the first time theoretical views that embrace computational models and developmental neurobiology and emphasize the interplay of time experience and cortical architecture to explain emergent knowledge with an empirical line of research identifying a set of general purpose sensory perceptual and learning mechanisms that guide knowledge acquisition across different domains and through development

Chomskyan (R)evolutions Douglas A. Kibbee, 2010-02-18 It is not unusual for contemporary linguists to claim that Modern Linguistics began in 1957 with the publication of Noam Chomsky's *Syntactic Structures* Some of the essays in *Chomskyan R evolutions* examine the sources the nature and the extent of the theoretical changes Chomsky introduced in the 1950s Other contributions explore the key concepts and disciplinary alliances that have evolved considerably over the past sixty years such as the meanings given for Universal Grammar the relationship of Chomskyan linguistics to other disciplines Cognitive Science Psychology Evolutionary Biology and the interactions between mainstream Chomskyan linguistics and other linguistic theories active in the late 20th century Functionalism Generative Semantics and Relational Grammar The broad understanding of the recent history of linguistics points the way towards new directions and methods that linguistics can pursue in the future

Learning and the Infant Mind Amanda Woodward, Amy Needham, 2009 When asking how cognition comes to take its mature form learning seems to be an obvious factor to consider However until quite recently there has been very little contact between investigations of how infants learn and what infants know The chapters in this book document for the first time the insights that emerge when researchers who come from diverse domains and use different approaches make a genuine attempt to bridge this divide

Noonan,2014 Statistical language learning is an implicit process wherein language learners track sequential statistics in fluent speech and may it facilitate the learning of word boundaries This process is well studied however the cognitive mechanisms supporting it remain poorly understood The present thesis investigated whether domain specific or cross domain explicit working memory engagement would impair implicit statistical learning of word boundaries in fluent speech Participants n 110 were exposed to an implicit statistical word segmentation paradigm while concurrently engaged in no other task control or an explicit domain specific verbal or cross domain visuospatial working memory task of either low or high demand Participants in the control task and either visuospatial task low and high demand reliably segmented words from the artificial language however those in either verbal working memory condition low and high demand did not These findings suggest an interference effect on implicit verbal learning by explicit processing of material from the same domain *Publications of the American and Canadian Committees on Modern Languages* Modern Foreign Language Study,1928 *Linguistics and Language Behavior Abstracts* ,2007
