Generalized van der Waals Theory of Molecular Fluids in Bulk and at Surfaces Sture Nordholm,Jan Forsman,Cliff Woodward,Ben Freasier,Zareen Abbas,Robert Penfold,2018-09-05 Generalized van der Waals Theory of Molecular Fluids in

Bulk and at Surfaces presents successful research on the development of a new density theory of fluids that makes it possible to understand and predict a wide range of properties and phenomena The book brings together recent advances relating to the Generalized van der Waals Theory and its use in fluid property calculations The mathematics presentation is oriented to an audience of varying backgrounds and readers will find exercises that can be used as a textbook for a course at the upper undergraduate or graduate level in physics or chemistry In addition it is ideal for scientists from other areas such as geophysics oceanography and molecular biology who are interested in learning about and understanding molecular fluids Presents an approximate but fully derived and physically explained theory of molecular fluids to facilitate broad applications Derives a density functional theory of classical fluids and applies it to obtain equations of state as well as non uniform fluid properties e g surface tension and adsorption Demonstrates how the theory can be applied to complex multi center molecules forming a polymer fluid Provides user friendly programs to redraw figures for variable parameters and to perform calculations in particular applications Includes a set of exercises to support use of the book in a course

Individual Susceptibility to Genotoxic Agents in the Human Population Frederick J. De Serres, Ronald W. Pero, William Sheridan, 2012-12-06 As a result of the industrial revolution man's technological achievements have been truly great increasing the quality of life to almost unimagined proportions but all this progress has not been accomplished without equally unimagined health risks Sufficiently diagnostic short term assay procedures have been developed in recent years for us to determine that there are mutagenic agents among thousands of chemicals to which the human population is exposed today These chemicals were not significantly present prior to the industrial revolution As of today there are no procedures available which have been adequately demonstrated to assess individual susceptibility to genotoxic exposures and as a result we have had to rely on extrapolating toxicological data from animal model systems The question is can we afford to allow such an increased environmental selection pressure via mutagenic exposures to occur without expecting adverse long term effects on our health It is apparent from this line of reasoning that what is lacking and immediately needed are test procedures that can be applied to humans to assess genotoxic exposure as well as individual susceptibility to it There have already been two conferences which have focused attention on this research area Guidelines for studies of human populations exposed to mutagenic and reproductive hazards A D Bloom ed March of Dimes Birth Defects Foundation White Plains New York 1981 and Indicators of genotoxic exposure in humans Banbury Report 13 B A Bridges B E Butterworth and I B
