Bergin, 1993-01-01 The successful implementation of CASE technology requires a long term and comprehensive commitment to the pursuit of raising the quality of software design and ultimately improving the information management within the organization Computer Aided Software Engineering Issues and Trends for the 1990s and Beyond covers all aspects of preparing an organization for the successful implementation of a CASE program Actual case studies empirical research and theoretical suppositions are used to assess how CASE is being used today and to predict future directions **Managing Information Resources in the 1990s** Information Resources Management Association. International Conference, 1990-01-01 This collection highlights why IRM is an approach to the overall utilization and management of information resources as a mainstream organizational resource This book helps you stay up to date on the changes within information technology management Practitioners and academicians at the forefront of this fast paced field address timely and important issues in information resources technology management The authors focus on the increasingly important role of IT in providing a competitive advantage in today s changing environment *Software Maintenance - A Management Perspective* Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification

maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact
