Language Acquisition and Conceptual Development Melissa Bowerman, Stephen C. Levinson, 2001-01-11 Recent years have seen a revolution in our knowledge of how children learn to think and speak In this volume leading scholars from these rapidly evolving fields of research examine the relationship between child language acquisition and cognitive development At first sight advances in the two areas seem to have moved in opposing directions the study of language acquisition has been especially concerned with diversity explaining how children learn languages of widely different types while the study of cognitive development has focused on uniformity clarifying how children build on fundamental presumably universal concepts This book brings these two vital strands of investigation into close dialogue suggesting a synthesis in which the process of language acquisition may interact with early cognitive development It provides empirical contributions based on a variety of languages populations and ages and theoretical discussions that cut across the disciplines of psychology linguistics and anthropology

False Allegations Brent E. Turvey, John O. Savino, Aurelio Coronado Mares, 2017-07-06 **False Allegations Investigative and Forensic Issues in Fraudulent Reports of Crime** provides investigators and forensic examiners with a reference manual comprised of objective protocols for managing cases It helps them understand the nature and extent of false allegations to more accurately identify false allegations should they present in casework It also prepares users on how to confront and explain false allegations including instances where colleagues and supervisors may be steeped in bias denial or self interest Responding law enforcement agencies have a duty of care to investigate all reported crime to recognize and uncover false allegations and prevent them from causing harm to the innocent Failure to do so can result in miscarriages of justice When law enforcement fails in their duty of care they are also exposed to civil liability from those that have been falsely accused Presents a first of its kind forensic textbook on a subject that has been highly politicized Written by qualified investigative and forensic professionals who work cases and give expert testimony Offers applied protocols to conduct forensic investigations and evaluations including red flags Based on the most recent scientific research practice and protocols Includes extensive case examples used to augment a variety of different false report models

The Encyclopedia of American Civil Liberties Paul Finkelman, 2006 Publisher Description

Human Spatial Cognition and Experience Toru Ishikawa, 2020-06-15 This book offers students an introduction to human spatial cognition and experience and is designed for graduate and advanced undergraduate students who are interested in the study of maps in the head and the psychology of space We live in space and space surrounds us We interact with space all the time consciously or unconsciously and make decisions and actions based on our perceptions of that space Have you ever wondered how some people navigate perfectly using maps in their heads while other people get lost even with a physical map What do you mean when you say you have a poor sense of direction How do we know where we are How do we use and represent information about space This book clarifies that our knowledge and feelings emerge as a consequence of our interactions with the surrounding space and show

that the knowledge and feelings direct guide or limit our spatial behavior and experience Space matters or more specifically space we perceive matters Research into spatial cognition and experience asking fundamental questions about how and why space and spatiality matters to humans has thus attracted attention It is no coincidence that the 2014 Nobel Prize in Physiology or Medicine was awarded for research into a positioning system in the brain or inner GPS and that spatial information and technology are recognized as an important social infrastructure in recent years This is the first book aimed at graduate and advanced undergraduate students pursuing this fascinating area of research The content introduces the reader to the field of spatial cognition and experience with a series of chapters covering theoretical empirical and practical issues including cognitive maps spatial orientation spatial ability and thinking geospatial information navigation assistance and environmental aesthetics

Spatial Representation Barbara Landau, James E. Hoffman, 2012-10-18 Despite our impression of a seamless spatial world mature human spatial knowledge is composed of sub systems each specialized This book uses the case of Williams syndrome a rare genetic deficit to argue for specialization of function in both normal and unusual development The evidence suggests a speculative hypothesis linking the genetic deficit to changes in the timing of emergence for different sub systems More broadly the book shows the complexity of spatial cognition its genetic correlates and realization in the brain
