They deliver the payload after fulfilling a certain requirement: The prerequisite is the detonator for the logic bomb. This characteristic enables logic code bombs to remain undetected for extended periods of time. The date of a significant event or the deletion of an employee from the firm's payroll could serve as the trigger. **Time bombs** are also present in logic bombs, with triggers connected to dates or specific times.

They have an unknown payload: This is true until the payload is activated. The part of malware known as the payload is responsible for carrying out the harmful action; in other words, it determines what kind of harm the virus is designed to cause. The payload may cause the theft of sensitive data or the distribution of **spam emails** through an affected system.

They are latent until they are activated: Logic bombs are not intended to explode immediately, much like a ticking time bomb. To hide their identities, **attackers that target a system from within frequently utilize logic bombs**. Subtle logic bombs can go unnoticed for years.
