The Recovery Process In Damaged Ecosystems:

The Recovery Process in Damaged Ecosystems John Cairns,1980 **Disturbance and Ecosystems** H. A. Mooney,M. Godron,2012-12-06 The earth s landscapes are being increasingly impacted by the activities of man Unfortunately we do not have a full understanding of the consequences of these disturbances on the earth s productive capacity This problem was addressed by a group of French and U S ecologists who are specialists at levels of integration extending from genetics to the biosphere at a meeting at Stanford California sponsored by the National Science Foundation and the Centre National de la Recherche Scientifique With a few important exceptions it was found at this meeting that most man induced disturbances of ecosystems can be viewed as large scale patterns of disturbances that have occurred generally on a small scale in ecosystems through evolutionary time Man has induced dramatic large scale changes in the environment which must be viewed at the biosphere level Acid deposition and CO increase are two 2 examples of the consequences of man s increased utilization of fossil fuels It is a matter of considerable concern that we cannot yet fully predict the ecological consequences of these environmental changes Such problems must be addressed at the international level yet substantive mechanisms to do this are not available Strategies for Protection and Management of Floodplain Wetlands and Other Riparian Ecosystems Raymond Roy Johnson,United States. environmental regulatory and management agencies most notably the Environmental Protection Agency move toward a broad set of management goals to protect ecosystem health developing an adequate definition for ecosystem health has become increasingly important This work is a multidisciplinary collection of perspectives on the concept of health as it relates to ecosystems The contributors leading ecologists philosophers and economists analyze the normative conceptual and biological issues surrounding the idea of ecosystem health They examine both theoretical and practical aspects of the issues and look at philosophical and ethical underpinnings as well as implications for public policy and ecosystems management Ecosystem Health is a groundbreaking attempt to formulate an understanding of the quality and health of natural environments so that regulatory mandates can be brought in line with legislative goals Ultimately it seeks a new ethic of sustainability that will serve to protect the vital processes of nature
