

7 PHASES OF INCIDENT RESPONSE

1

Preparing for Potential Incidents

Define clear communication channels, implement response checklists, and provide staff with quality cybersecurity training.

2

Identifying and Assessing Threats

Assess whether an event is a cyber-attack, evaluate its intensity, and classify the cybersecurity incident based on the nature of the attack.

3

Containing the Impact

Isolate the affected systems and impede the incident from propagating further.

4

Investigating and Eradicating Threats

Make sure the threat is no longer present in the organization's network by investigating the root cause of the incident and eradicating any threats from the system.

5

Recovering and Restoring Operations

Restore the affected systems to their pre-incident state to get your business back up and running as normal.

6

Learning from the Incident

Document everything that occurred during the incident and the response. Use this information to recognize areas for improvement in the organization's security posture and incident response plan.

7

Ongoing Testing and Evaluation

Strengthen your security posture by continuously testing and evaluating your incident response plan to ensure that it remains current and effective in the face of ever-evolving cyber threats.

Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e.g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species
