The Roundness Of Things:

The Roundness of Things ,1980 **Do Numbers Exist?** Peter van Inwagen,William Lane Craig,2024-03-12 In Do Numbers Exist Peter van Inwagen and William Lane Craig take opposite sides on whether there are abstract objects such as numbers and properties Craig argues that there are no abstract objects whereas Van Inwagen argues that there are Their exchange explores various arguments about the existence and nature of abstract objects They focus especially on whether our ordinary and scientific thought and talk commit us to abstract objects surveying the options available to us and the objections each faces The debate covers central problems and methods in metaphysics and also delves into theological questions raised by abstract objects Key Features Showcases the presentation and defense of two points of view on the existence of abstract objects from two of the world s leading philosophers Presents definitions in an easily accessible form Provides frequent summaries of previously covered material Includes a glossary of all specialized vocabulary

Metaphysics Peter van Inwagen,2024-01-22 This book is an introduction to metaphysics It presupposes no previous acquaintance with philosophy and addresses the following questions What is metaphysics Is there a plurality of things or is there only one thing Is there an external world a world of things that exist independently of human thought and sensation What is time Is there such a thing as objective truth Why is there something rather than nothing Does our existence have a meaning Are we physical or non physical beings Do we have free will Are there things that do not exist Do universals exist This Fifth Edition differs from the Fourth in that the long previously difficult chapter on time has been extensively rewritten making it much more accessible and engaging for the student reader In addition the author has enhanced clarity throughout the text with improvements to word choice sentence structure and paragraph lucidity Finally the Notes and Suggestions for Further Reading at the end of each chapter and the General Bibliography have all been brought up to date Key Features Presupposes no prior acquaintance with philosophy making the book ideal for the undergraduate student or interested general reader Offers 13 chapters organized into three parts and each with its own introduction The Way the World Is Why the World Is The Inhabitants of the World Incorporates extensive revisions to Chapter 4 on temporality Includes updates to the Chapter Notes and Suggestions for Further Reading as well as to the General Bibliography A History of Painting: The renaissance in Central Italy Haldane Macfall,1911 Life and Teachings of Abbas Effendi Myron Henry Phelps,1903

Complete Philosophical and Theological Treatises of Nicholas of Cusa Cardinal Nicholas (of Cusa),2001 The Principles of Photographic Pictorialism Frederick Colin Tilney,1930 **The Four-Category Ontology** E. J. Lowe,2005-12-01 E J Lowe sets out and defends his theory of what there is His four category ontology is a metaphysical system that recognizes two fundamental categorial distinctions which cut across each other to generate four fundamental ontological categories The distinctions are between the particular and the universal and between the substantial and the non substantial The four

categories thus generated are substantial particulars non substantial particulars substantial universals and non substantial universals Non substantial universals include properties and relations conceived as universals Non substantial particulars include property instances and relation instances otherwise known as non relational and relational tropes or modes Substantial particulars include propertied individuals the paradigm examples of which are persisting concrete objects Substantial universals are otherwise known as substantial kinds and include as paradigm examples natural kinds of persisting objects This ontology has a lengthy pedigree many commentators attributing it to Aristotle on the basis of certain passages in his apparently early work the Categories At various times during the history of Western philosophy it has been revived or rediscovered but it has never found universal favour perhaps on account of its apparent lack of parsimony as well as its commitment to universals In pursuit of ontological economy metaphysicians have generally preferred to recognize fewer than four fundamental ontological categories However Occam s razor stipulates only that we should not multiply entities beyond necessity Lowe argues that the four category ontology has an explanatory power unrivalled by more parsimonious systems and that this counts decisively in its favour He shows that it provides a powerful explanatory framework for a unified account of causation dispositions natural laws natural necessity and many other related matters such as the semantics of counterfactual conditionals and the character of the truthmaking relation As such it constitutes a thoroughgoing metaphysical foundation for natural science
