**The Ape that Spoke** John McCrone, 1991 The story of how the human mind evolved and what happened once Homo sapiens learned to speak

**The Human Apes**, 2005 While on an expedition in Central Africa a boy discovers human apes who offer him membership in their community

**Dialogues on the Human Ape** Laurent Dubreuil, Sue Savage-Rumbaugh, 2018-12-25 A primatologist and a humanist together explore the meaning of being a human animal Humanness is typically defined by our capacity for language and abstract thinking Yet decades of research led by the primatologist Sue Savage Rumbaugh has shown that chimpanzees and bonobos can acquire human language through signing and technology Drawing on this research Dialogues of the Human Ape brings Savage Rumbaugh into conversation with the philosopher Laurent Dubreuil to explore the theoretical and practical dimensions of what being a human animal means In their use of dialogue as the primary mode of philosophical and scientific inquiry the authors transcend the rigidity of scientific and humanist discourses offering a powerful model for the dissemination of speculative hypotheses and open ended debates grounded in scientific research Arguing that being human is an epigenetically driven process rather than a fixed characteristic rooted in genetics or culture this book suggests that while humanness may not be possible in every species it can emerge in certain supposedly nonhuman species Moving beyond irrational critiques of ape consciousness that are motivated by arrogant anthropocentric views Dialogues on the Human Ape instead takes seriously the continuities between the ape mind and the human mind addressing why language matters to consciousness free will and the formation of the human animal self

*The Real Planet of the Apes* David R. Begun, 2018-11-13 The astonishing new story of human origins Was Darwin wrong when he traced our origins to Africa The Real Planet of the Apes makes the explosive claim that it was in Europe not Africa where apes evolved the most important hallmarks of our human lineage In this compelling and accessible book David Begun one of the world's leading paleoanthropologists transports readers to an epoch in the remote past when the Earth was home to many migratory populations of ape species Begun draws on the latest astonishing discoveries in the fossil record as well as his own experiences conducting field expeditions to offer a sweeping evolutionary history of great apes and humans He tells the story of how one of the earliest members of our evolutionary group evolved from lemur like monkeys in the primeval forests of Africa Begun then vividly describes how over the next ten million years these hominoids expanded into Europe and Asia and evolved climbing and hanging adaptations longer maturation times and larger brains As the climate deteriorated in Europe these apes either died out or migrated south reinvading the African continent and giving rise to the lineages of African great apes and ultimately humans Presenting startling new insights The Real Planet of the Apes fundamentally alters our understanding of human origins
