The Human Front:

Human Front Ken MacLeod, 2013-03-25 Ken MacLeod is one of the brightest and most progressive of Britain's Hard SF stars who navigate exciting new futures to the delight of legions of fans around the world. His works combine cutting edge scientific speculation, socialist and anarchist themes, and a deeply humanistic vision. Described by fans and adversaries alike as a techno-utopian socialist, MacLeod thrusts his characters into uncanny encounters that have included AI singularities, divergent human evolution, and posthuman cyborg resurrection. In his novella *The Human Front*, a young Scottish guerrilla fighter is drawn into low intensity sectarian war in a high intensity dystopian future, and the arrival of an alien intruder complete with saucer calls for new tactics and strange alliances. Its companion piece *Other Deviations*, first published in this edition, reveals the complex origins of MacLeod's alternate history. Plus *The Future Will Happen Here Too*, in which a Hebridean writer celebrates the landscapes that shaped his work, measures Scotland's past against humanity's future, and peers into the eyes of an eel. And featuring our irreverent *Outspoken Interview*, a candid and often cantankerous conversation that showcases our author's deep erudition and mordant wit.

Manipulative approaches to human brain dynamics Keiichi Kitajo, Takashi Hanakawa, Risto Juhani Ilmoniemi, Carlo Miniussi, 2015-05-29 In this EBook we highlight how newly emerging techniques for non-invasive manipulation of the human brain combined with simultaneous recordings of neural activity contribute to the understanding of brain functions and neural dynamics in humans. A growing body of evidence indicates that the neural dynamics, e.g. oscillations, synchrony, are important in mediating information processing and networking for various functions in the human brain. Most of previous studies on human brain dynamics however show correlative relationships between brain functions and patterns of neural dynamics measured by imaging methods such as electroencephalography (EEG), magnetoencephalography (MEG), near-infrared spectroscopy (NIRS), positron emission tomography (PET), and functional magnetic resonance imaging (fMRI). In contrast, manipulative approaches by non-invasive brain stimulation (NIBS) have been developed and extensively used. These approaches include transcranial magnetic stimulation (TMS) and transcranial electric stimulation (tES) such as transcranial direct current stimulation (tDCS), alternating current stimulation (tACS), and random noise stimulation (tRNS) which can directly manipulate neural dynamics in the intact human brain. Although the neural correlate approach is a strong tool, we think that manipulative approaches have far greater potential to show causal roles of neural dynamics in human brain functions. There have been technical challenges with using manipulative methods together with imaging methods. However, thanks to recent technical developments, it has become possible to use combined methods such as TMS/EEG coregistration. We can now directly measure and manipulate neural dynamics and analyze functional consequences to show causal roles of neural dynamics in various brain functions. Moreover, these combined methods can probe brain

excitability plasticity and cortical networking associated with information processing in the intact human brain The contributors to this EBook have succeeded in showcasing cutting edge studies and demonstrate the huge impact of their approaches on many areas in human neuroscience and clinical applications **The Human Body** H. Holden,John Langton,1879 **News and the Human Interest Story** Helen MacGill Hughes, In this account of the growth of newspapers in modern industrial society Helen Hughes traces the development of a mass audience through analysis of the origins of the human interest story in the popular ballads of an earlier day She shows how such commonly found interests as a taste for news of the town ordinary gossip and moving or gripping tales with a legendary or mythic quality have reflected

the tastes of ordinary folk from the days of illiterate audiences to the present She explains how these interests ultimately were combined with practical economic and political information to create the substance and demand for a popular press In describing the rise and fall of newspaper empires each with their special readership attractions Dr Hughes shows how technological innovation and idiosyncratic creativity were used by owners to capture and hold a reading audience Once this audience developed it could be fed a variety of messages beamed at reinforcing and maintaining both general and specific publics as well as a view of the world consonant with that of the publisher and major advertisers Hughes offers a persuasive argument for the continuing viability of this method for combined social control instruction and amusement captured by the association of news and the human interest story Lectures on the Science of Human Life Sylvester Graham,1872
