Humanities Online: A Practical Guide to the Virtual Classroom Steven J. Hoffman, 2010-12-15 This practical guide is essential for anyone new to or intimidated by online instruction Drawing on the expertise of teachers of the humanities who have deep experiences in the online environment this work explores a variety of areas within the online teaching experience It discusses the differences between online and face to face learning environments and assesses and evaluates best practices in developing and teaching online courses This volume is not really about the technology but instead focuses on the ways in which available technologies can be used to enhance teaching in both synchronous and asynchronous forums and as such it will still be worth the read many years from now even in the face of rapid technological change Contributions from faculty members teaching in art education communication English history social studies education and interdisciplinary studies departments as well as directors of writing centers and online education and distance learning programs are included Essays in this volume will assist instructors faculty members and administrators new to the online experience but who want to learn more about making the transition to online teaching in navigating this transition gracefully [Global Computing.](#)

Agha,2001-04-18 Concurrency and distribution have become the dominant paradigm and concern in computer science Despite the fact that much of the early research in object oriented programming focused on sequential systems objects are a natural unit of distribution and concurrency as elucidated early on by research on the Actor model Thus models and theories of concurrency the oldest one being Petri nets and their relation to objects are an attractive topic of study This book presents state of the art results on

Petri nets and concurrent object oriented programming in a coherent and competent way The 24 thoroughly reviewed and revised papers are organized in three sections The first consists of long papers each presenting a detailed approach to integrating Petri nets and object orientation Section II includes shorter papers with emphasis on concrete examples to demonstrate the approach Finally section III is devoted to papers which significantly build on the Actor model of computation
