Social Entropy Theory:

Social Entropy Theory Kenneth D. Bailey, 1990-01-23 Social Entropy Theory illuminates the fundamental problems of societal analysis with a nonequilibrium approach a new frame of reference built upon contemporary macrological principles including general systems theory and information theory Social entropy theory using Shannon's H and the entropy concept avoids the common and often artificial separation of theory and method in sociology The hallmark of the volume is integration as seen in the author's interdisciplinary discussions of equilibrium entropy and homeostasis Unique features of the book are the introduction of the three level model of social measurement the theory of allocation the concepts of global mutable immutable discussion of order and power and a large set of testable hypotheses

Entropy Measures of Inequality Kenneth D. Bailey, 1981

Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be

posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Handbook of Energy Management in Agriculture Amitava Rakshit,Asim

Biswas,Deepranjan Sarkar,Vijay Singh Meena,Rahul Datta,2023-05-15 This handbook provides a holistic overview of different aspects of energy management in agriculture with an orientation to address the sustainable development goals It covers possible applications not only from a technical point of view but also from economic financial social regulatory and political viewpoints Agriculture is one of the most imperative sectors that contribute to the economy across different agro ecologies of the universe with energy inputs in each stage of production from making and applying chemicals to fueling tractors that lay seeds and harvest crops to electricity for animal housing facilities The majority of agricultural research has focused on the use of input production and productivity whereas rational energy budgeting and use remain an overlooked and likely underestimated segment ignored so far while formulating agro ecosystem framework Energy management study is a new frontier of agriculture and is challenging due to complex enterprises spatial temporal variability exposure to pollution and the

predominant effect of the anthropogenic factor on ecology and environment But it is worth taking the challenge considering the important prerequisite role of energy for sustainable development which has been evidenced from increasing research in recent times Of recent origin there are critical in depth studies around the globe assessing the capture and flow of energy in the ecosystem which will help to develop a conceptual framework to incorporate this vital resource in the agriculture management template This book is a state of the art resource for a broad group of readers including a diversity of stakeholders and professionals in universities public energy institutions farmers and farming industry public health and other relevant institutions and the broader public as well

Sociology and the New Systems Theory Kenneth D. Bailey,1994-01-11 This book provides current information about the many recent contributions of social systems theory While some sociologists feel that the systems age ended with functionalism in reality a number of recent developments have occurred within the field The author makes these developments accessible to sociologists and other non systems scholars and begins a synthesis of the burgeoning systems field and mainstream sociological theory The analysis shows not only that important points of rapprochement exist between systems theory and sociological theory but also that systems theory has in some cases anticipated developments needed in mainstream theory

Whole Onflow Gavin J. Andrews,Cameron Duff,Keith Woodward,2025-12-17 This book describes whole onflow which is at once the emergence and becoming of the entirety of the world universe and any actual unique position whatsoever in it now A physical plane and self organizing process that owes its energy to the Big Bang in our region it now unfolding the infinitely complex and varied world we engage contribute to and experience There have been many academic ideas on the nature of emergence and becoming in the world including ideas on the world s overall emergence and becoming In this book we extend some of these ideas to conceptualize a physical plane incorporating all possible positions and local variability all geographies what we refer to as whole onflow We answer some key questions including What is the processual nature of whole onflow through which the world emerges and becomes in the moment How might thinking in terms of whole onflow expand our ideas on the world s productions from health to ageing to capitalism and beyond How might this help us get to grips with today s kinetic energy dependent multi textured and process ignorant world The book lays out the broad theoretical landscape It demonstrates how principles and processes established by physics and cosmology might be combined with principles and processes conveyed by social theory to describe the world in whole onflow Dealing then with the very origins of all that is and all that is social the book is core reading for social scientists who like to think fundamentally It is very much a speculative and provocative piece but a necessary one and will be of particular interest to those studying the world through poststructuralist posthumanist new materialist and non representational theoretical lenses Moving forward certain scholars might follow the specific points of departure and pathways the book signposts Others might choose to tread the new ground the book opens up in their own ways
