Social Influences On Vocal Development:

Social Influences on Vocal Development Charles T. Snowdon, Martine Hausberger, 1997-03-20 For at least 30 years there have been close parallels between studies of birdsong development and those of the development of human language Both song and language require species specific stimulation at a sensitive period in development and subsequent practice through subsong and plastic song in birds and babbling in infant humans leading to the development of characteristic vocalisations for each species This book illustrates how social interactions during development can shape vocal learning and extend the sensitive period beyond infancy and how social companions can induce flexibility even into adulthood Social companions in a wide range of species including birds and humans but also cetaceans and nonhuman primates play important roles in shaping vocal production as well as the comprehension and appropriate usage of vocal communication This book will be required reading for students and researchers interested in animal and human communication and its development

Social Influences on Vocal Development in a Wild Parrot Caleb Michael Mand Arellano, 2019 **Oxford Handbook of Developmental Behavioral Neuroscience** Mark Blumberg, John Freeman, Scott R. Robinson, 2010 The Oxford Handbook of Developmental Behavioral Neuroscience is a seminal reference work in the burgeoning field of developmental behavioral neuroscience which has emerged in recent years as an important sister discipline to developmental psychobiology This handbook part of the Oxford Library of Neuroscience provides an introduction to recent advances in research at the intersection of developmental science and behavioral neuroscience while emphasizing the central research perspectives of developmental psychobiology Contributors to the Oxford Handbook of Developmental Behavioral Neuroscience are drawn from a variety of fields including developmental psychobiology neuroscience comparative psychology and evolutionary biology demonstrating the opportunities to advance our understanding of behavioral and neural development through enhanced interactions among parallel disciplines In a field ripe for collaboration and integration the Oxford Handbook of Developmental Behavioral Neuroscience provides an unprecedented overview of conceptual and methodological issues pertaining to comparative and developmental neuroscience that can serve as a roadmap for researchers and a textbook for educators Its broad reach will spur new insights and compel new collaborations in this rapidly growing field

Evolutionary Perspectives on Human Development Robert G. Burgess, Kevin MacDonald, 2005 This new edition of *Evolutionary Perspectives on Human Development* is obligatory reading for anyone interested in the integration of evolutionary theory into developmental psychology It provides a valuable corrective to recent narrow approaches which argue that the human mind is constructed exclusively of domain specific mechanisms and which deemphasize the importance of human psychological and behavioral plasticity Anyone who reads this book will come away with a richer understanding of our shared human nature Bill Irons Northwestern University In this volume Burgess and MacDonald have brought together a distinguished group of psychologists and anthropologists to investigate how given our evolutionary heritage genetic make up

and salient environment behavior cognition and emotion unfold from the human organism They make clear that both evolutionary functional and proximate behavioral perspectives are essential to understanding the human mind and its products Many of these essays should be required reading for sociobiologists evolutionary psychologists and evolutionary anthropologists and their ilk Jeffrey Kurland Penn State It s clear that evolutionary biology has a tremendous amount to offer when it comes to our understanding of human development and yet many experts in developmental psychology have remained impervious to these insights At last this may change Burgess and MacDonald have compiled a rich array of theory and data much of it contributed by the leading lights of evolutionary psychology or if you prefer sociobiology A very valuable collection and one that might help define a new and important field David P Barash University of Washington Evolutionary Perspectives on Human Development Second Edition considers the role of evolutionary theory in the field of developmental psychology to examine key topics of individual human development This unique book fills an important gap in the literature applying evolutionary models to human development by focusing on central development issues The book emphasizes both domain general evolved psychological mechanisms and domain specific processes The text also integrates behavior genetic research with evolutionary and developmental principles In this contributed volume editors Robert L Burgess and Kevin MacDonald have brought together a distinguished group of social and behavioral scientists employing multiple levels of analysis drawn from a variety of academic disciplines This diverse group of contributors illustrates the enormous power of evolutionary theory by elucidating human behavior and its development and the various ways it is manifested in different environments Evolutionary Perspectives on Human Development applies evolutionary theory to such topics as parent child relationships the maltreatment of children psychopathology cooperation and competition among siblings and the acquisition of vital resources in different cultural settings from an evolutionary point of view Key Features Comprehensive coverage of the impact of evolutionary theory on human development provides students with the most thorough foundation available in this area Contributions by leading scholars and researchers expose readers to the exciting research and developments that have been occurring in the field An introductory chapter written by the volume editors provides an accessible overview of the book Evolutionary Perspectives on Human Development provides state of the art groundwork in evolutionary theory as viewed by leading thinkers in the field It is an excellent supplementary textbook for advanced undergraduate and graduate courses in evolutionary and developmental psychology

The Integrative Neurobiology of Affiliation Carol Sue Carter, I. Izja Lederhendler, Brian Kirkpatrick, 1999 This book examines the biological especially the neural substrates of affiliation and related social behaviors Affiliation refers to social behaviors that bring individuals closer together This includes such associations as attachment parent offspring interactions pair bonding and the building of coalitions Affiliations provide a social matrix within which other behaviors including reproduction and aggression may occur While reproduction and aggression also reduce the distance between individuals their expression is regulated in part by the positive social fabric of

affiliative behavior Until recently researchers have paid little attention to the regulatory physiology and neural processes that subserve affiliative behaviors The integrative approach in this book reflects the constructive interactions between those who study behavior in the context of natural history and evolution and those who study the nervous system The book contains the partial proceedings of a conference of the same title held in Washington DC in 1996 The full proceedings was published as part of the Annals of the York Academy of Sciences *Evolution of Communication Systems* D. Kimbrough Oller, Ulrike Griebel, 2004 Using a comparative approach in order to understand the origins of communication this title explores the mysterious circumstances that surround the emergence of human languages as well as the methods that other species use in order to communicate *The Oxford Handbook of Voice Perception* Sascha Frühholz, Pascal Belin, 2019 Speech perception has been the focus of innumerable studies over the past decades While our abilities to recognize individuals by their voice state plays a central role in our everyday social interactions limited scientific attention has been devoted to the perceptual and cerebral mechanisms underlying nonverbal information processing in voices The Oxford Handbook of Voice Perception takes a comprehensive look at this emerging field and presents a selection of current research in voice perception The forty chapters summarise the most exciting research from across several disciplines covering acoustical clinical evolutionary cognitive and computational perspectives In particular this handbook offers an invaluable window into the development and evolution of the vocal brain and considers in detail the voice processing abilities of non human animals or human infants By providing a full and unique perspective on the recent developments in this burgeoning area of study this text is an important and interdisciplinary resource for students researchers and scientific journalists interested in voice perception [The Impact of Parental Care on Behavioral Development in Orange-winged Amazon \(Amazona Amazonica\) Chicks](#) Rebecca Ann Fox, 2002 **Tectonic Evolution and Midplate Volcanism in the South Pacific** Kelsey Allyn Jordahl, 1999 Changes in morphology of the Marquesas Fracture Zone are correlated with small changes in Pacific Farallon relative motion The simple flexural signal of a locked fracture zone may be obscured by tectonic effects and there is no evidence for the release of shear stress on the fracture zone by vertical slip after leaving the active transform One such small change in plate motion is documented in the Southern Austral Island region of the South Pacific A twelve degree clockwise change in Pacific Farallon relative motion occurred around fifty million years ago This Eocene change in spreading direction and rate is locally constrained with observations of magnetic anomalies and spreading fabric orientation At the southeastern end of the Cook Austral Island chain multiple episodes of volcanism have left a diverse population of seamounts Volume estimates from geophysical data and modeling show that one half to two thirds of the volcanic material is over thirty million years old while the remainder is less than five million years old Seismic and bathymetric data imply the presence of abyssal basalt flows in the flexural moat of the Austral Islands probably associated with Austral Islands volcanism which may contribute a significant amount of material to the archipelagic apron *The Journal of the Acoustical Society of America* Acoustical Society of

America,2007 *Whistle Use and Whistle Sharing by Allied Male Bottlenose Dolphins, Tursiops Truncatus* Stephanie Lynn Watwood,2003 Cont Therefore whistles may initiate reunions between partners This thesis demonstrates that free ranging male dolphins use signature whistles in the same way as females and captive dolphins *Bioacoustics* ,2003 Effect of Social Influences on Developmental Processes in Songbirds Yi Ning Chen,2016 Interactions with other individuals can greatly influence behavioral development For example infants and children demonstrate minimal speech and language learning following passive exposure to speech and social interactions with adults enhance the acquisition and production of phonemes Goldstein et al 2003 Goldstein Kuhl et al 2003 Similarly in social animals such as songbirds social interactions with conspecifics can dramatically influence developmental processes and adult behaviors In my thesis I describe two sets of studies aimed at revealing the influence of social interactions on the development of song learning and preferences in songbirds Previous studies have investigated the role of social interactions with conspecifics on song development but such studies did not effectively control for the amount and type of song exposure factors that significantly affect vocal learning Here I use a yoked paradigm that controls for the amount and type of song exposure to demonstrate that social interactions with adults significantly enhance vocal learning I document that social influences on attention to song appear central to the social enhancement of learning since variation in attentiveness and in the social modulation of attention significantly predicted variation in learning I also discovered that adult tutors alter the structure of their songs when directing them towards pupils in manners similar to how humans change their vocalizations when speaking to infants These changes to song are distinct from the changes that occur when males sing female directed courtship songs suggesting that these vocal motor changes by tutors could promote song learning in juveniles Furthermore I also reveal that social interactions that rapidly enhance learning also increase the activity of norepinephrine and dopamine synthesizing neurons in the locus coeruleus and ventral tegmental area suggesting a contribution of these areas to the social enhancement of song learning Just as social experiences affect the developmental acquisition of song early auditory song experiences can also shape female song preferences in adulthood Females that associate with both parents throughout development show a significant preference for their father s song over other males songs Miller 1979 Furthermore normally reared females prefer courtship songs over non courtship songs and demonstrate different levels of neural activity in response to these songs Woolley Doupe 2008 While social interactions have been shown to affect song preference for different males little is known about the role of early auditory experiences in the formation of preferences for courtship songs I show that neural responses in higher order auditory processing areas to courtship and non courtship songs are not affected by developmental experiences suggesting that they arise independently of early auditory experience Taken together the studies described in this thesis reveal strong parallels between processes of vocal learning in humans and zebra finches inherent biases in the zebra finch auditory system and how developmental processes are critically shaped by social interactions in zebra finches *Behavioral Neurobiology of*

Birdsong Harris Philip Zeigler, Peter Marler, 2004 An overview of findings in the bird song system that have had a major impact on neuroscience research and have fundamentally altered our concepts of brain function The 32 papers constitute the proceedings of a conference on The Behavioural Neurobiology of Bird Song held in New York in 2002 **International Journal of Primatology** ,2003 Include abstracts *Dissertation Abstracts International* ,2000 Songs, Roars, and Rituals Lesley J. Rogers, Gisela T. Kaplan, 2000 An up to date account of the science of animal communication this book also considers modern concepts and modern controversies primarily those surrounding the evolution of human language and the use of symbolic language by apes It concludes with a look at the future of communication between humans and animals
