Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Encyclopedia of Nanoscience and Society David H. Guston, 2010-07-14 Labeled either as the next industrial revolution or as just hype nanoscience and nanotechnologies are controversial touted by some as the likely

engines of spectacular transformation of human societies and even human bodies and by others as conceptually flawed These challenges make an encyclopedia of nanoscience and society an absolute necessity Providing a guide to what these understandings and challenges are about the Encyclopedia of Nanoscience and Society offers accessible descriptions of some of the key technical achievements of nanoscience along with its history and prospects Rather than a technical primer this encyclopedia instead focuses on the efforts of governments around the world to fund nanoscience research and to tap its potential for economic development as well as to assess how best to regulate a new technology for the environmental occupational and consumer health and safety issues related to the field Contributions examine and analyze the cultural significance of nanoscience and nanotechnologies and describe some of the organizations and their products that promise to make nanotechnologies a critical part of the global economy Written by noted scholars and practitioners from around the globe these two volumes offer nearly 500 entries describing the societal aspects of nanoscience and nanotechnology Key Themes Art Design and Materials Bionanotechnology Centers Context Economics and Business Engagement and the Public Environment and Risk Ethics and Values Geographies and Distribution History and Philosophy Integration and Interdisciplinarity Nanotechnology Companies Nanotechnology Organizations The Best Books for Academic Libraries: Science, technology, and agriculture ,2002 From Global Warming to Dolly the Sheep David E.
