On the Design of Sample Surveys and Adjustment of Sample Size G. B. Gray, 1975 Sample surveys are designed by methodologists in close co operation with subject matter specialists system analysts and field personnel in as scientific a manner as possible The coefficients of variation of major characteristics survey and field costs as well as feasibility of the survey with regard to timeliness and staff available are all taken into account Regardless of the given specifications in advance such as sample size or cost a nearly optimum sample design can be derived for say the most efficient estimates subject to fixed cost on sample size However for budgetary or other reasons changes in the requirements timeliness of data etc result in changes in the initial design If the new design can be undertaken according to the altered specifications again a near optimum design can be obtained If however the specifications of costs or sample size are changed after much of the sampling materials have been drawn and delivered then an inefficient design will be obtained This technical memorandum addresses itself to consider at least from a qualitative point of view the losses due to changes in the specifications in mid stream using the concept of cost per unit information or the cost times the mean square error
