Transformation Groups In Differential Geometry:

Transformation Groups in Differential Geometry Shoshichi Kobayashi, 2012-12-06 Given a mathematical structure one of the basic associated mathematical objects is its automorphism group The object of this book is to give a biased account of automorphism groups of differential geometric structures All geometric structures are not created equal some are creations of gods while others are products of lesser human minds Amongst the former Riemannian and complex structures stand out for their beauty and wealth A major portion of this book is therefore devoted to these two structures Chapter I describes a general theory of automorphisms of geometric structures with emphasis on the question of when the automorphism group can be given a Lie group structure Basic theorems in this regard are presented in 3 4 and 5 The concept of G structure or that of pseudo group structure enables us to treat most of the interesting geometric structures in a unified manner In 8 we sketch the relationship between the two concepts Chapter I is so arranged that the reader who is primarily interested in Riemannian complex conformal and projective structures can skip 5 6 7 and 8 This chapter is partly based on lectures I gave in Tokyo and Berkeley in 1965

Topology of Transitive Transformation Groups A. L. Onishchik, 1994 [Topological Transformation Groups](#)

Deane Montgomery, Leo Zippin, 2018-06-13 An advanced monograph on the subject of topological transformation groups this volume summarizes important research conducted during a period of lively activity in this area of mathematics The book is of particular note because it represents the culmination of research by authors Deane Montgomery and Leo Zippin undertaken in collaboration with Andrew Gleason of Harvard University that led to their solution of a well known mathematical conjecture Hilbert's Fifth Problem The treatment begins with an examination of topological spaces and groups and proceeds to locally compact groups and groups with no small subgroups Subsequent chapters address approximation by Lie groups and transformation groups concluding with an exploration of compact transformation groups

Cohomology Theory of Topological Transformation Groups W.Y. Hsiang, 2012-12-06 Historically applications of algebraic topology to the study of topological transformation groups were originated in the work of L E 1 Brouwer on periodic transformations and a little later in the beautiful fixed point theorem of P A Smith for prime periodic maps on homology spheres Upon comparing the fixed point theorem of Smith with its predecessors the fixed point theorems of Brouwer and Lefschetz one finds that it is possible at least for the case of homology spheres to upgrade the conclusion of mere existence or non existence to the actual determination of the homology type of the fixed point set if the map is assumed to be prime periodic The pioneer result of P A Smith clearly suggests a fruitful general direction of studying topological transformation groups in the framework of algebraic topology Naturally the immediate problems following the Smith fixed point theorem are to generalize it both in the direction of replacing the homology spheres by spaces of more general topological types and in the direction of replacing the group tl by more general compact groups

Lie Groups and Differential Geometry [1956] Proceedings of the Conference on Transformation Groups P. S. James, 2014-05-16 The *Mathematical Works of J H C Whitehead* Volume 1 *Differential Geometry* contains all of Whitehead's published work on differential geometry along with some papers on algebras Most of these were written in the period 1929-1937 but a few later articles are included The book begins with a list of Whitehead's works in chronological order of writing as well as a biographical note by M H A Newman and Barbara Whitehead and a mathematical appreciation by John Milnor This is followed by separate chapters on topics such as linear connections a method of obtaining normal representations for a projective connection representation of projective spaces convex regions in the geometry of paths locally homogeneous spaces in differential geometry and the decomposition of an infinitesimal group Also included are chapters on locally homogeneous spaces in differential geometry Maurer's equations linear associative algebras an expression of Hopf's invariant as an integral and normalizers of transformation groups *General Catalogue* University of California, Berkeley, 1899 **Register** University of California, Berkeley, 1906 **Annual Announcement of Courses of Instruction** University of California (1868-1952), 1906
