Trapping Of Neutral Atoms:

Laser Cooling and Trapping of Neutral Atoms W. D. Phillips, NATIONAL BUREAU OF STANDARDS GAITHERSBURG MD ELECTRICITY DIV., 1984 Using laser cooling techniques we have produced a sample of stopped atoms with sufficiently large density and small velocity width to be useful for loading neutral atom traps Author **Trapping of Neutral Atoms** Nathan Newbury, Carl Edwin Wieman, 1998 Cooling and Trapping of Neutral Atoms Harold J. Metcalf, 1991 **Cooling and Trapping of Neutral Atoms** Harold Metcalf, 1994 *Magnetic Trapping of Neutral Atoms* Vanderlei Bagnato, Gregory Lafyatis, Alexander Martin, Eric Raab, Riyadh Ahman-Bitar, MASSACHUSETTS INST OF TECH CAMBRIDGE RESEARCH LAB OF ELECTRONICS., 1987 The program is to slow trap and cool neutral atoms Laser light is used to slow and cool atoms and magnetic forces are used to trap them Ultimately we hope to be able to trap atoms for days and cool them to temperatures on the order of 000001 K in addition to the interesting scientific and technical challenges involved in trapping and cooling atoms we hope to open several new lines of investigation with these cooled atoms Cold trapped atoms constitute a good system for studying collective phenomena such as Bose condensation low energy Na and Na Na and coherent optical effects the deBroglie wavelength can exceed the optical wavelength They also offer opportunities for performing ultra high resolution spectroscopy and are extremely promising candidates for a new generation of frequency standards Traps for Neutral Atoms David Pritchard, MASSACHUSETTS INST OF TECH CAMBRIDGE RESEARCH LAB OF ELECTRONICS., 1989 We have demonstrated two atom traps one magnetic and one using light forces In each case ours was the second trap of that type embodying significant new conceptual contributions which permitted tremendous advances over the previous trap of that type in each case by about 100000 in number trapped and 100 in time trapped Both of our designs have been used without improvement by other groups Meanwhile only one new trap has been demonstrated a light trap which performed less well than ours This suggest that major advances in atom traps will no longer appear with regularity JHD AC Electric Trapping of Neutral Atoms Sophie Schlunk, 2008 *Cooling and trapping of neutral atoms* Harold J. Metcalf, Peter van der Straten, 1994 *Nano-optical Traps for Neutral Atoms* Brian Miller Murphy, 2008 We present the theoretical basis for a novel nano optical trap for neutral atoms The trap utilizes plasmonic resonances of metallic nanoparticles to shape laser light fields in a subwavelength region The combination of the laser field and auxiliary electrostatic fields provides a trapping potential for atoms Blue detuned from atomic resonance the plasmon enhanced laser field strongly damps atomic motion A new method to efficiently calculate electric fields surrounding nanospheres is used to study the interaction between light and metallic nanostructures Theory and calculations for the modification of atomic properties such as excited state decay rates and energy levels due to the proximity of the nanostructure are presented The interaction between atoms and light fields including optical force damping and momentum diffusion are studied in detail These interactions are synthesized to design an atomic nanotrap whose properties including trapping potential lifetime and loading rates are further analyzed *A Laser*

Trap for Neutral Atoms William C. Stwalley, IOWA UNIV IOWA CITY., 1988 The purpose of this project is to construct and study a laser trap for neutral atoms initially potassium K At low densities such a trap could be used to address a number of fundamental questions e g the interaction of an individual atom with an electromagnetic field collision dynamics and recombination We have studied the feasibility and imitations of a purely laser trap concept a corner cube trap for trapping neutral K atoms The confinement of the atoms in the two dimensions perpendicular to the laser is provided in the cavity of a newly constructed high power alexandrite laser operating in the CW TEM 01 mode doughnut mode tuned slightly to the blue side of the resonance line of the K atom By reflecting the TEM 01 laser back on itself with two mirrors one caps the ends of the cylindrical trap resulting in a slightly weaker end plug Keywords Laser trap Neutral atom trap Multiphoton ionization Atomic recombination MJM
