Mirlan Aldayarov,Istvan Dobozi,Thomas Nikolakakis,2017-02-27 The large scale transformation of Kazakhstan s power sector following independence in 1991 was reflected by the country s move toward liberalizing the market and implementing sector regulation As an early adopter of a liberalized multimarket model consisting of bilateral spot balancing ancillary and capacity submarkets Kazakhstan s power sector was regarded a market reform leader among countries of the former Soviet Union having achieved a much improved supply and demand balance and service quality However despite the noteworthy headway sector reforms remain predominantly as unfinished business The excess generation capacity that was inherited from the former Soviet Union at a time when the energy only market prices were too low to attract serious investors has masked the need to reflect on the long term outlook of the country s power production As the investment crunch unfolded in the mid 2000s a diverging concern almost immediately arose that is the capacity additions of existing and planned generations may not be sufficient to keep pace with the perpetuating and significant increase in the demand for power Instead of applying market mechanisms to allow prices to rise and reflect the underlying supply and demand gap the GoK addressed the issue by implementing administrative command and control measures This study draws on the World Bank s long standing

engagement in Kazakhstan's energy sector and a number of recent technical assistance and advisory support activities. The study aims to i) objectively identify the principal challenges faced by the Kazakhstan power sector in its ongoing transition and outlining potential policy options and ii) draw lessons from Kazakhstan's experience in sector reforms for the broader international audience. The study covers broader sector issues including long term least cost power system planning supply and demand balancing tariff setting market structure and integration of renewable energy.

A Framework for State-level Renewable Energy Market Potential Studies Claire Kreycik, 2010. State level policymakers are relying on estimates of the market potential for renewable energy resources as they set goals and develop policies to accelerate the development of these resources. Therefore accuracy of such estimates should be understood and possibly improved to appropriately support these decisions. This document provides a framework and next steps for state officials who require estimates of renewable energy market potential. The report gives insight into how to conduct a market potential study including what supporting data are needed and what types of assumptions need to be made. The report distinguishes between goal oriented studies and other types of studies and explains the benefits of each.
