Teaching Young Children:

Choices In Theory And Practice Mac Naughton, Glenda, Williams, Gillian, 2008-11-01 This book presents early childhood students and staff with a broad and diverse range of teaching techniques to support children's learning. It examines 26 techniques ranging from simple ones such as describing and listening to more complex methods such as deconstruction and scaffolding. The strategies selected are derived from the best current research knowledge about how young children learn. A detailed evaluation of each strategy enables childcare staff, early childhood teachers and students to expand their repertoire of teaching strategies and to critically evaluate their own teaching in early childhood settings. Vignettes and examples show how early childhood staff use the techniques to support children's learning and help to bring the discussion of each technique to life. Revised and updated in light of the latest research, new features include: Coverage of the phonics debate; Addition of ICT content; Questions for further discussion; Revision to the chapter on problem solving; Updated referencing throughout. *Teaching Young Children* is key reading for students and experienced early childhood staff working in diverse settings with young children.

Private Speech Rafael M. Diaz, Laura E. Berk, Rafael Diaz, 2014-02-04 Since the publication of Vygotsky's *Thought and Language in the United States* a number of North American and European investigators have conducted systematic observations of children's spontaneous private speech giving substantial support to Vygotsky's major hypotheses particularly those regarding the social origins of higher psychological functions. However, there still remain many vital questions about the origins, significance and functions of private speech. How can social and private speech be validly differentiated? What kinds of social interactions promote the use of private speech? What are the sources of individual differences in the use of private speech? This unique volume addresses these and many other important questions. Characterized by a strong emphasis on original data, it reports on systematic observations of spontaneous private speech in children and adults in both laboratory and naturalistic settings. In addition to its systematic analysis of common methodological problems in the field, the book contains the most comprehensive bibliography of the private speech literature currently available.
