Singh,2026-01-01 This book provides a comprehensive exploration of the role of plant based medicines or phytomedicine in the prevention and treatment of neurodegenerative disorders It delves into how various phytochemicals can modulate key biological pathways involved in diseases like Alzheimer s Parkinson s and other neurodegenerative conditions The chapters highlight the importance of phytopharmacological agents such as polyphenols curcumin and resveratrol in targeting oxidative stress protein aggregation and inflammation Later a few chapters discuss how polyphenols help protect mitochondria and some explore curcumin s role in regulating the mTOR and autophagy pathways This book is an excellent resource for researchers in neuroscience pharmacology and natural medicine as well as practitioners seeking holistic approaches to neurological health Reactive Oxygen Species in Metabolic Inflammation Sumel Ashique,Neeraj

Mishra,2026-02-06 Reactive oxygen species ROS mediated inflammation plays a critical role in the onset and progression of various metabolic disorders including obesity diabetes and non alcoholic fatty liver disease NAFLD Dysregulated ROS production leads to oxidative stress which triggers chronic low grade inflammation disrupting cellular homeostasis and metabolic functions This pathological interplay exacerbates insulin resistance lipid accumulation and mitochondrial dysfunction creating a vicious cycle of metabolic dysregulation Understanding the molecular mechanisms behind ROS mediated inflammation is crucial for developing targeted therapeutic interventions to break this cycle and mitigate disease progression This comprehensive book bridges the gap between fundamental molecular insights and translational therapeutic strategies It begins by delving into the signaling pathways involved such as NF B and Nrf2 and highlighting the role of key players like mitochondria and antioxidant systems Later chapters explore emerging therapeutic approaches including postbiotics natural antioxidants and pharmacological agents offering practical solutions for managing metabolic disorders By addressing this critical intersection of inflammation oxidative stress and metabolism this book is a valuable guide for researchers clinicians and healthcare professionals who aim to tackle the global burden of metabolic diseases effectively

Poultry Science ,1992 Vol 5 includes a separately paged special issue dated June 1926 **Advances of lipid metabolism in neurological diseases and mental disorders** Chao Luo,Xiao-Yuan Mao,Jie Yu ,Xiaobo Mao,2026-02-24 Lipid metabolism plays a crucial role in the development and function of the nervous system with its dysregulation implicated in various neurological diseases and mental disorders The brain s rich lipid content for example neurosteroids derived from cholesterol are intricately linked to lipid metabolism as they not only regulate the synthesis and breakdown of lipids in the brain but also modulate the overall lipid profile impacting brain function and health Emerging research demonstrates that imbalances in lipid profiles such as altered cholesterol and fatty acid metabolism contribute to the pathogenesis of conditions like epilepsy Alzheimer s disease Parkinson s disease and depression These lipid imbalances affect cellular processes including membrane fluidity neurotransmitter function and inflammation which are critical for cognitive health and mood regulation This research background highlights the necessity for a deeper understanding of lipid metabolism s impact on

neurological and psychiatric conditions offering the potential for novel therapeutic targets and early diagnostic markers. The primary objective of this research is to elucidate the intricate interplay between lipid metabolism and its implications for the progression of neurological diseases and mental disorders. We aim to investigate how the dysregulation of lipid homeostasis contributes to the pathogenesis of conditions. By employing cutting edge molecular biology techniques we will identify key lipid species and metabolic pathways disrupted in these disorders. Our research will also explore the potential of modulating lipid metabolism as a therapeutic strategy to ameliorate disease symptoms and halt disease progression. Ultimately we seek to enhance the understanding of lipid mediated mechanisms in neurodegenerative and psychiatric conditions paving the way for novel targeted interventions. We welcome manuscript submissions of all types including original studies, method papers, reviews, perspectives and case reports. Submissions may encompass clinical trials and basic in vivo or in vitro studies. Themes for submission include but are not limited to the following: Lipid metabolism in neurological diseases e.g. epilepsy, Parkinson's disease, Alzheimer's disease; Lipid metabolism in mental disorders e.g. schizophrenia, major depressive disorder, generalized anxiety disorder; Neurosteroids in brain diseases; Gut-brain axis in neurological diseases and mental disorders; Treatment or intervention in neurological diseases and mental disorders through lipid metabolic regulation; Treatment or intervention on neurological disease and mental disorders through lipid metabolic regulation.
