Shortly after its first publication Autodesk Revit for Architecture No Experience Required quickly became the market leading real world guide for learning and building with Revit, the powerful and sophisticated Building Information Modeling (BIM) software used by professionals the world over. Fully updated for Revit 2020, this popular user friendly book helps you learn the Revit interface, understand the fundamental concepts and features of the software, and design, document, and present a 3D BIM project. A continuous step by step tutorial guides you through every phase of the project, from placing walls, doors, windows, structural elements, dimensions, and text to generating documentation, advanced detailing, site grading, construction scheduling, material takeoffs, and much more. Updated and revised to include new content, this invaluable guide covers all the fundamental skills every Revit user needs. Whether used as a complete start to finish lesson or as a quick reference for unfamiliar tasks, this book will help you learn each phase of designing, documenting, and presenting a four story office building using a simple yet engaging continuous tutorial. Follow the tutorial sequentially or jump to any chapter by downloading the project files from the Sybex website. Use the start to finish tutorial project as a reference for your own real world projects and to develop a powerful Revit skillset. Gain thorough knowledge of Revit's essential concepts and features to make the move from 2D drafting to 3D building information modeling. Get up to speed with advanced features including new coverage of advanced walls, families, sites, topography, and more. Autodesk Revit 2020 for Architecture No Experience Required is the go to guide for both professionals and students seeking to learn Revit's essential functions quickly and effectively to understand real workplace projects, processes, and workflows, and to set the stage for continuing on to more advanced skills. *Mechanizing Hypothesis Formation* Jan Rauch, Milan Šimůnek, David Chudán, Petr Máša, 2022-10-20 Mechanizing hypothesis formation is an approach to exploratory data analysis. Its development started in the 1960s, inspired by the question: can computers formulate and verify scientific hypotheses? The development resulted in a general theory of logic of discovery. It comprises theoretical calculi

dealing with theoretical statements as well as observational calculi dealing with observational statements concerning finite results of observation Both calculi are related through statistical hypotheses tests A GUHA method is a tool of the logic of discovery It uses a one to one relation between theoretical and observational statements to get all interesting theoretical statements A GUHA procedure generates all interesting observational statements and verifies them in a given observational data Output of the procedure consists of all observational statements true in the given data Several GUHA procedures dealing with association rules couples of association rules action rules histograms couples of histograms and patterns based on general contingency tables are involved in the LISp Miner system developed at the Prague University of Economics and Business Various results about observational calculi were achieved and applied together with the LISp Miner system The book covers a brief overview of logic of discovery Many examples of applications of the GUHA procedures to solve real problems relevant to data mining and business intelligence are presented An overview of recent research results relevant to dealing with domain knowledge in data mining and its automation is provided Firsthand experiences with implementation of the GUHA method in the Python language are presented
