The Complete Guide to Green Building & Remodeling Your Home Martha Maeda, 2011 In today's economy and socially conscious environment regarding the environment many people cannot afford not to start considering ways they can build or remodel their home to ensure it is green With scientific sources such as the UN council on global warming making statements about the degradation of ice flow and environmental conditions by 2050 and the likelihood that crude oil sources will be used up within the next fifty years it is especially necessary for young families to consider the implications of re-examining their homes and living situations to be more green This book will guide you and your family through the process of learning more about and implementing the necessary changes and perspectives needed to change your home or build a new home that is environmentally conscious and prepared for the changing economic and environmental climate in the coming decades You will learn why people have started to build green and how it can be done in today's regulatory and cost conditions quickly and inexpensively You will learn how to remodel with green in mind and how to start working with building professionals that can provide the necessary materials plans and paperwork you need to proceed You will learn which materials are best for green building by lifespan and how to choose between various green materials You will learn how to not only use green materials but to make sure the construction process is green as well You will learn the basics of framing your building natural building methods the energy systems you might use and the heating cooling options at your disposal Construction and environmental experts have been interviewed and their expertise is included in this book to help you learn everything you need to accomplish the above as well as to know what kinds of water and waste systems are best

how to site plan and landscape your home and what the most common myths about green building are You will learn ten things you can do on any building project to keep it green and any materials you should always have on hand for anything you do around the house Regardless of whether you are just looking to remodel to make your house greener or are building a new home this book will give you everything you need to stay green and respect the environment with your home The New Ecological Home Daniel D. Chiras, 2004 Today a new generation of architects and builders is emerging intent on creating homes that meet human needs for shelter while causing only a fraction of the environmental impact of conventional housing The New Ecological Home provides an overview of green building techniques materials products and technologies that are either currently available or will be in the near future Author Daniel Chiras provides a wealth of up to date practical information for home buyers owner builders and anyone interested in building for a sustainable future **Green Building Guide** Austin (Tex.). Environmental and Conservation Services Department, 1992 *Green Building and Sustainable Development* Jonathan E. Furr, 2009 The legal and economic landscape for building and development have fundamentally been altered by the country's major environmental problems climate change deforestation loss of biodiversity ozone depletion pollution and unsustainable natural resource consumption rates The editors provide practical information for lawyers to assist their clients in fully understanding green building and sustainable development concepts so they can operate successfully in the evolving economic and regulatory environment while minimizing the potential cost penalty of business as usual practices **Green Building Materials** Ross Spiegel, Dru Meadows, 2012 Beskrivelse The ultimate user's manual to green building materials To properly select and specify green building materials successful architects need authoritative real world advice on how to select and use nontoxic recycled and recyclable products and how to integrate these products into the design process in order to capitalize on the many practical and economic advantages of going green Green Building Materials Third Edition is the most reliable up to date resource to meet today's green building challenges from reducing waste and improving energy efficiency to promoting proper code compliance and safeguarding against liability claims Written by two nationally known experts on green building methods and materials Green Building Materials Third Edition offers in depth practical information on the product selection product specification and construction process This new Third Edition is an excellent hands on guide to today's newest range of green building materials what they are where to find them how to use them effectively and how to address LEED requirements Organized by CSI MasterFormat category for fast access to specific information it features A new chapter on eco labels green standards and product certification A new appendix providing reference information for sustainability standards and standards development organizations New sample specifications including green power requirements vegetated green roof systems rainwater harvesting and water reuse systems Revised and updated review of trends affecting the future of green building materials Updated approach and reference information for the product selection process Green Building Materials Third Edition is an essential tool for

designing environmentally friendly buildings ones made from materials that preserve the Earth's natural legacy for future generations

A Beginner's Guide to Green Building, 2005 **Green Building** Anthony C. Floyd, Allan Bilka, 2012

The cutting edge green building projects of today are quickly becoming standard practice for tomorrow. In order for industry professionals to keep up with this trend they'll need to have a solid grasp on green building and the technologies, market forces, and governmental policies that drive it.

Green Building: A Professional's Guide to Concepts, Codes, and Innovation is designed for those seeking a better understanding of current design and building performance issues. Coverage includes straightforward explanations of how buildings and ecosystems can work together, as well as the sustainability concerns inspiring current regulations. Relevant codes and standards are discussed in depth, with particular attention to the International Green Construction Code. Knowledge is essential for environmentally appropriate and efficient building solutions. Readers of this book will have a better understanding of where the building industry is headed and how to become compliant with green practices and regulations.

Understanding Green Building Guidelines: For Students and Young Professionals Traci Rose Rider, 2010-02-17

Summarizes the main issues and strategies of the forceful and fast-paced green building movement. Many professions are increasingly producing tools to assist clients in breaking down and understanding the different elements that reside under the umbrella of the sustainability movement. For the design and construction professions, this unpacking often takes the form of green building guidelines and rating systems. This book aims to look at a selection of both national and local green building rating systems and guidelines ranging from commercial to residential. While the goal is to provide students and young professionals with a solid overview of each product, enabling them to understand the differences and select the most appropriate system for their chosen projects, the book provides valuable overviews and comparisons for anyone interested in better buildings: designers, homeowners, realtors, contractors, facility managers, site designers, and more.

Sustainable Landscape Construction, Third Edition Kim Sorvig, J. William Thompson, 2018-02

Basic principles: Sustainability in context. Principle 1: Keep healthy sites healthy. Principle 2: Heal injured soils and sites. Principle 3: Favor living flexible materials. Principle 4: Respect the waters of life. Principle 5: Pave less. Principle 6: Consider origin and fate of materials. Principle 7: Know the costs of energy over time. Principle 8: Celebrate light, respect darkness. Principle 9: Quietly defend silence. Principle 10: Maintain to sustain. Principle 11: Demonstrate performance, learn from failure.

Sustaining principles, evolving efforts.

When people should go to the books stores, search start by shop, shelf by shelf, it is in reality problematic. This is why we provide the books compilations in this website. It will unconditionally ease you to see guide **Guide Green Building** as you such as.

By searching the title, publisher, or authors of guide you really want, you can discover them rapidly. In the house, workplace, or perhaps in your method can be all best place within net connections.
