**Global environmental footprints** Peters, Glen P.,Andrew, Robbie M.,Karstensen, Jonas,2016-08-09 Emissions and resources are typically allocated to national territories There has been increased interest in allocating environmental flows to the final consumption of goods and services The resulting environment footprints are particularly relevant for global environmental problems in a globalised world Developed

countries generally have larger environmental footprints than their national territorial flows and the gap has tended to increase over the last two decades. Consequently some have argued that environmental policies should address the environmental footprint. Despite the potential policy relevance there has been relatively little research on policy applications. While environmental footprints have many advantages policy applications are limited by estimation and interpretation uncertainty and by the lack of a clear policy motivation.

**How to Live a Low-Carbon Life**

Christopher Goodall, 2012-05-04

Climate change is the greatest challenge facing humanity. Drastic reduction of carbon emissions is vital if we are to avoid a catastrophe that devastates large parts of the world. Governments and businesses have been slow to act and individuals now need to take the lead. The Earth can absorb no more than 3 tonnes of carbon dioxide emissions each year for every person on the planet if we are to keep temperature and rainfall change within tolerable limits. Yet from cars and holiday flights to household appliances and the food on our plates, Western consumer lifestyles leave each of us responsible for over 12 tonnes of carbon dioxide a year, four times what the Earth can handle. Individual action is essential if we want to avoid climate chaos. *How to Live a Low Carbon Life* shows how easy it is to take responsibility.
