**Building the Skyline** Jason M. Barr, 2016 The Manhattan skyline is one of the great wonders of the modern world But how and why did it form Much has been written about the city s architecture and its general history but little work has explored the economic forces that created the skyline This book chronicles the economic history of the Manhattan skyline In the process the book debunks some widely held misconceptions about the city s history Part I lays out the historical and environmental background that established Manhattan s real estate trajectory before the Skyscraper Revolution at the end of the 19th century The book begins with Manhattan s natural and geological history and then moves on to how it influenced early land use and neighborhood formation and how these early decisions eventually impacted the location of skyscrapers Part II focuses specifically on the economic history of skyscrapers and the skyline investigating the reasons for their heights frequencies locations and shapes The book discusses why skyscrapers emerged downtown and why they appeared three miles to the north in midtown but not in between Contrary to popular belief it was not due to the depths of Manhattan s bedrock nor the presence of Grand Central Station Rather midtown s emergence was a response to the economic and demographic forces that were taking place north of 14th Street after the Civil War The book also presents the first rigorous investigation of the causes of the building boom during the Roaring Twenties Contrary to conventional wisdom the boom was largely a rational response to the economic growth of the nation and city The last chapter investigates the value of Manhattan Island and the relationship between skyscrapers and land prices Finally an Epilogue offers policy recommendations for a resilient and robust future skyline

Invented Cities Mona Domosh, 1996-01-01 Why do cities look the way they do In this intriguing new book Mona Domosh seeks to answer this question by comparing the strikingly different landscapes of two great American cities Boston and New York Although these two cities appeared to be quite similar through the eighteenth century distinctive characteristics emerged as social and

economic differences developed Domosh explores the physical differences between Boston and New York comparing building patterns and architectural styles to show how a society's vision creates its own distinctive urban form Cities Domosh contends are visible representations of individual and group beliefs values tensions and fears Using an interdisciplinary approach that encompasses economics politics architecture historical and cultural geography and urban studies Domosh shows how the middle and upper classes of Boston and New York the building elite inscribed their visions of social order and social life on four landscape features during the latter half of the nineteenth century New York's retail district and its commercial skyscrapers and Boston's Back Bay and its Common and park system New York's self expression translated into unlimited commercial and residential expansion conspicuous consumption and architecture designed to display wealth and prestige openly Boston in contrast focused more on culture The urban gentry limited skyscraper construction prevented commercial development of Boston Common and maintained homes and parks near the business district Many fascinating lithographs illustrate the two cities contrasting visions

### **The News Media In National And International Conflict**

Andrew Arno, Wimal Dissanayake, 2019-07-11 Ironically as telecommunications technology the embodiment of modernity advances bringing people in different nations into more direct contact during conflict situations traditional cultural factors become increasingly important as differing ways of thinking and acting collide The mass media can be seen as a factor in the creation of international conflict they also claim many scholars are the key to control and resolution of those problems Whichever side of the coin one chooses to look at mass communication as cause or cure of conflict there is no doubt that the news media are no longer peripheral players on the global scene they are important participants whose organizational patterns of behavior values and motivations must be taken into account in understanding national and international conflict In this volume a distinguished group of authors explores the variety of ways the news media newspapers radio and television are involved in conflict situations Conflicts between the United States and Iran India and Pakistan and the United States and China are examined and national level studies in Sri Lanka Iran Hong Kong and the United States provide varied contexts in which the authors look at the complex interrelationships among government news media and the public in conflict situations

them As Professor Freeman notes two things went wrong with narrative styles over time the church became biblically and theologically illiterate and the promised stress on experience didn't always measure up to the weight of the gospel Readers are invited to sit in on the class to reflect on the expositional nature of preaching and to experience the stories of some modern storytellers Flannery O'Connor Alice Walker and others to see what they might teach us about narratives of depth In the end we discover what may be the most important word in preaching The Bookman, 1917 Construction, 1913
