Two New Sciences Selections:

Dialogues Concerning Two New Sciences Galileo Galilei, 1642 Galileo's groundbreaking dialogues are a summation of three decades of scientific work he had undertaken in the fledgling field of physics. This edition includes the diagrams crucial for understanding the text. Writing these dialogues in 1638, the elderly Galileo had a life of achievements behind him. Despite attempts at suppression of his writings by the Roman Inquisition, his ideas were successfully communicated across Europe. The motion of objects and resistance to such motion, the concept of velocity, and the laws of gravity are merely a few of the topics covered in these detailed dialogues. At the outset, we are introduced to the three conversation partners: Salviati, Sagredo, and Simplicio. These three Venetians embark on a scientific discussion, hoping to explain the curiosities of things such as speed and movement. Over the course of four days, their meetings grow in complexity and scope as they strive to explain physical phenomena. Later, we encounter many propositions and theorems concerning a wide variety of subjects; these represent the sum of Galileo's progress in understanding gravity, motion, resistance, acceleration, velocity, and the behavior of material structures. The Two New Sciences referred to by the title are the nature of materials and the motion of objects. A total of 130 illustrations and charts populate this text; for the most part, they are situated adjacent to their respective proposition or theorem. In many of the more complex explanations, they are important in aiding the reader to grasp what Galileo means. Through absorbing these wide-ranging investigations, we may appreciate the justness of Galileo's moniker: The father of modern physics. This edition's translation to English is by Alfonso de Salvio and Henry Crew. The former was an expert on the technical aspects of the Italian language, while the latter was a longstanding scholar of physics with much experience teaching in the field.

Two New Sciences ; Selections Galileo Galilei, 1642 *Italian Literature Before 1900 in English Translation* Robin Healey, 2011-01-01 *Italian Literature before 1900 in English Translation* provides the most complete record possible of texts from the early periods that have been translated into English and published between 1929 and 2008. It lists works from all genres and subjects and includes translations wherever they have appeared across the globe. In this annotated bibliography, Robin Healey covers over 5,200 distinct editions of pre-1900 Italian writings. Most entries are accompanied by useful notes providing information on authors, works, translators, and how the translations were received. Among the works by over 1,500 authors represented in this volume are hundreds of editions by Italy's most translated authors: Dante Alighieri, Niccolò Machiavelli, and Giovanni Boccaccio, and other hundreds which represent the author's only English translation. A significant number of entries describe works originally published in Latin. Together with Healey's *Twentieth Century Italian Literature in English Translation*, this volume makes comprehensive information on translations accessible for schools, libraries, and those interested in comparative literature.

Pub desc **On Knowing--The Natural Sciences** Richard P. McKeon, 2018-05-12 Well before the current age of discourse, deconstruction, and multiculturalism, Richard McKeon propounded a philosophy of pluralism showing how facts and values are dependent on diverse ways of

reading texts This book is a transcription of an entire course including both lectures and student discussions taught by McKeon As such it provides an exciting introduction to McKeon s conception of pluralism a central aspect of neo Pragmatism while demonstrating how pluralism works in a classroom setting In his lectures McKeon outlines the entire history of Western thinking on the sciences Treating the central concepts of motion space time and cause he traces modern intellectual debates back to the ancient Greeks notably Plato Aristotle Democritus and the Sophists As he brings the story of Western science up to the twentieth century he uses his fabled semantic schema reproduced here for the first time to uncover new ideas and observations about cosmology mechanics dynamics and other aspects of physical science Illustrating the broad historical sweep of the lectures are a series of discussions which give detail to the course s intellectual framework These discussions of Plato Aristotle Galileo Newton and Maxwell are perhaps the first published rendition of a philosopher in literal dialogue with his students Led by McKeon s pointed questioning the discussions reveal the difficulties and possibilities of learning to engage in serious intellectual communication
