Typed Lambda Calculi and Applications Pawel Urzyczyn,2005-03-31 The 7th International Conference on Typed Lambda Calculi and Applications TLCA 2005 was held in Nara Japan from 21 to 23 April 2005 as part of the Joint Conference on Rewriting Deduction and Programming RDP 2005 This book contains the contributed papers and extended abstracts of two invited talks given by Thierry Coquand and Susumu Hayashi A short abstract of the joint RDP invited lecture by Amy Felty is also included

The 27 contributed papers were selected from 61 submissions of generally very high quality and the Program Committee had a hard time making the selection. The editor would like to thank everyone who submitted a paper and to express his regret that many interesting works could not be included. The editor also wishes to thank the invited speakers, the members of the Program and Organizing Committees, the Publicity Chair, and the referees for their joint effort towards the success of the conference. The support from the Nara Convention Bureau is gratefully acknowledged. The typed lambda calculus continues to be an important tool in logic and theoretical computer science. Since 1993 the research progress in this area has been documented by the TLCA proceedings. The present volume contributes to this tradition.

Typed Lambda Calculi and Applications Marc Bezem, 1993-03-03. The lambda calculus was developed in the 1930s by Alonzo Church. The calculus turned out to be an interesting model of computation and became the prototype for untyped functional programming languages. Operational and denotational semantics for the calculus served as examples for other programming languages. In typed lambda calculi lambda terms are classified according to their applicative behavior. In the 1960s it was discovered that the types of typed lambda calculi are in fact appearances of logical propositions. Thus there are two possible views of typed lambda calculi as models of computation: where terms are viewed as programs in a typed programming language as logical theories where the types are viewed as propositions and the terms as proofs. The practical spin off from these studies are functional programming languages which are mathematically more succinct than imperative programs, systems for automated proof checking based on lambda calculi. This volume is the proceedings of TLCA 93, the first international conference on Typed Lambda Calculi and Applications organized by the Department of Philosophy of Utrecht University. It includes 29 papers selected from 51 submissions.

Typed Lambda Calculi and Applications Philippe de Groote, J. Roger Hindley, 1997-03-12. This book constitutes the refereed proceedings of the Third International Conference on Typed Lambda Calculi and Applications TLCA 97 held in Nancy, France, in April 1997. The 24 revised full papers presented in the book were carefully selected from a total of 54 submissions. The book reports the main research advances achieved in the area of typed lambda calculi since the predecessor conference held in 1995 and competently reflects the state of the art in the area.

Typed Lambda Calculi and Applications Jean-Yves Girard, 2003-07-31. This book constitutes the refereed proceedings of the 4th International Conference on Typed Lambda Calculi and Applications TLCA 99 held in L'Aquila, Italy, in April 1999. The 25 revised full papers presented were carefully reviewed and selected from a total of 50 submissions. Also included are two invited demonstrations. The volume reports research results on various aspects of typed lambda calculi. Among the topics addressed are noncommutative logics, type theory, algebraic data types, logical calculi, abstract data types, and subtyping.
