Rioux, 1987 Diving scientific diving and diver safety are specialized subject areas not generally well represented in even the largest of academic libraries largely because of difficulties in locating appropriate items to include in the collection However in order to adequately fulfill his/her responsibilities the Diving Safety Officer of a scientific diving program needs easy access to a broad range of books reports and journals covering all aspects of diving This bibliography outlines a comprehensive collection appropriate to the needs of a scientific diving program in a research or academic institution Items are grouped in broad subject areas corresponding to various aspects of the diving program Both title and author indexes are also included

COST B 2 and 1 44 COST B 3 10 6Wm 3 With a 12 14 km thick sedimentary sequence a radioactive contribution of 20 25 mWm² can be expected The effects of sediment deposition compaction pore water advection and radiogenic heat production have been combined in a numerical model Hutchison 1985 to estimate the undisturbed basement heat flux Although the sedimentation depresses the basement heat flux by 15 20% this effect is more than compensated by radioactive heat production in the sediments so that the surface flux is estimated to be higher than that from the basement The latter is calculated at about 33 39 mWm² 0 8 0 9 H F U a relatively low value The overall uncertainty is about 20 25% and other estimates on continental margins with thick sediments e g Reiter and Jessop 1985 probably have at least a similar uncertainty **Paperbound Books in Print** ,1992 **The Complete Photographer** Willard Detering Morgan,1942
