Plastics Now Billie Faircloth, 2015 Arguing that architects continued ignorance about plastics has prevented its use as a building material from becoming fully exploited Billie Faircloth draws on a wide range of original data to explore its use and development Essential reading Permanent Change Michael Bell, Craig Buckley, 2014-04-15 Almost every industry in the world has benefited from the invention of plastics but it is only in the recent past that they have begun to be appreciated as architectural materials in their own right Plastics are quickly becoming one of the most ubiquitous materials in construction and have the potential to reshape the roles of architects and engineers as well as the construction industry at large As a building material plastic allows for easily molded and formed shapes leading to increasingly malleable design processes Despite being the most deeply engineered building materials today plastics are still in the nascent stages of understanding in terms of their potential applications and uses In Permanent Change an interdisciplinary group of architects historians theorists and engineers collectively explore the past present and future possibilities of this innovative building material
