J. Mahan,1997-10-09 When it comes to bacterial disease we are living in a state of false security Antibiotics have indeed brought unprecedented health benefits protection from and cure of bacterial diseases during the past 50 years But there are ominous signs that the fortress and the defenses built on antibiotics are crumbling They are crumbling because we wittingly or unwittingly created selective conditions for the emergence of superior pathogens that can no longer be controlled by antibiotics There are numerous warnings After a long period of eclipse tuberculosis has now emerged as a serious threat unchecked by antibiotic treatment Recent years have seen reports of cholera epidemics of anthrax infections of serious problems with Salmonella and even with E coli just to name a few Mankind is in a race with microbial invaders The challenge is to anticipate and respond to developments that affect the precarious balance between man and microbe This will require new knowledge and it will take time for an effective application of that knowledge
