## **Tuberous Sclerosis Complex:**

**Tuberous Sclerosis Complex** Manuel Rodriguez Gomez, Julian R. Sampson, Vicky Holets Whittemore, 1999-07-15  
Tuberous Sclerosis is a genetic disease characterized by lesions of the skin and central nervous system seizures and sometimes severe mental retardation. Infants with this disease may appear overactive, autistic, or socially impaired. Because tuberous sclerosis involves abnormal cellular differentiation, aberrant neuronal migration, and excessive cell proliferation, this thoroughly revised edition will be of interest to a wide range of professionals involved in the study of biological mechanisms underlying many genetically determined neurological disorders.

**Tuberous Sclerosis Complex** Paolo Curatolo, 2003-01-10  
Correlating new genetic data and basic science regarding tuberous sclerosis, this collection covers clinical presentation, reviews history and current diagnostic criteria, and notes recent advances in neuropathology, molecular genetics, and neurobiology. Tuberous sclerosis incorporates malformations characterized by disturbances in cellular differentiation and growth. It appears with a complex association of different neurological phenotypes, including seizures, cognitive impairments, and autism.

**Tuberous Sclerosis Complex** David J. Kwiatkowski, Vicky Holets Whittemore, Elizabeth A. Thiele, 2011-08-24  
The only comprehensive overview of the molecular basis and clinical features of the genetic disorder tuberous sclerosis, which affects approximately 50,000 people in the US alone. Special focus is placed on novel insights into the signal transduction pathways affected by the disease, as well as genotype-phenotype correlations, while existing and potential therapies are also discussed in depth. The editors are leading experts in research and treatment of the disease, as well as the Vice President of the Tuberous Sclerosis Alliance, the only voluntary health organization for TSC in the US.

[TUBEROUS SCLEROSIS COMPLEX: A CASE REPORT](#), 2017  
BACKGROUND AND AIMS: The tuberous sclerosis complex (TSC) is a genetic disorder with autosomal dominant inheritance, caused by the mutation on TSC1 or TSC2. The frequency is

estimated at 1 6000 The most common clinical manifestations include skin abnormalities cerebral malformations renal angiomyolipomas and cardiac rhabdomyomas pulmonary lymphangioleiomyomatosis Greater morbidity and mortality is determined by the involvement of brain functions and a high prevalence of refractory epilepsy METHODS Clinical case and literature review RESULTS A 5 months old patient was referred due to abnormal movements compatible with infantile spasms At physical exam he had white patches hypomelanotic macules and fibrous plaques on occipital scalp area TSC was suspected and cranial MRI was performed that confirms the presence of cortical tubers and subependymal nodules The EEG showed multiple epileptiform paroxysms of occipital predominance Doses up to 75 mg kg d of Vigabatrin were required for seizures control and EEG normalization The echocardiogram showed two rhabdomyomas undiagnosed in prenatal period and the electrocardiography was compatible with WPW syndrome preexcitation syndrome An abdominal MRI the renal function and the ophthalmology exam were normal CONCLUSIONS TSC1 and TSC2 genes encode hamartin and tuberin proteins which form a complex controlling mTOR pathway essential for cell growth The different manifestations of the disease require a multidisciplinary management from epilepsy to the of an eventual failure renal or respiratory treatment Some features of epilepsy as early age at diagnosis the presence of infantile spasms the existence of various types of crisis and the poor response to treatment have been correlated with an increased risk of disability

signaling through repression of Dual Specificity Phosphatase 6 DUSP6 a negative regulator of ERK1 2 In summary my thesis suggests a novel mechanism whereby altered synaptic plasticity and seizure susceptibility in the TSC2 mouse model may be under epigenetic regulation The findings from these studies suggest alternative targets for therapeutic intervention in TSC patients
