Vertex Detectors:

Vertex Detectors, 2001 The purpose of a vertex detector is to measure position and angles of charged particle tracks to sufficient precision so as to be able to separate tracks originating from decay vertices from those produced at the interaction vertex Such measurements are interesting because they permit the detection of weakly decaying particles with lifetimes down to 10^{-13} s among them the tau lepton and charm and beauty hadrons These two lectures are intended to introduce the reader to the different techniques for the detection of secondary vertices that have been developed over the past decades The first lecture includes a brief introduction to the methods used to detect secondary vertices and to estimate particle lifetimes It describes the traditional technologies based on photographic recording in emulsions and on film of bubble chambers and introduces fast electronic registration of signals derived from scintillating fibers drift chambers and gaseous micro strip chambers The second lecture is devoted to solid state detectors It begins with a brief introduction into semiconductor devices and then describes the application of large arrays of strip and pixel diodes for charged particle tracking These lectures can only serve as an introduction the topic of vertex detectors Time and space do not allow for an in depth coverage of many of the interesting aspects of vertex detector design and operation

Vertex Detectors Francesco Villa, 2013-06-29 It has been widely recognized that the new physics results from a high energy collider are related to the detector capabilities and that future detectors must solve the problems presented by the new environment Vertex detectors in particular will have to sustain enormous rates have a great resistance to radiation damage while retaining good spatial accuracy Promising technologies are emerging and gaseous detectors are improving this workshop was intended as a point of reference towards future detectors with particular emphasis on experimental results achieved so far We wish to thank the Ettore Majorana Center for the splendid hospitality in Erice and the secretaries of the conference R Nania and G Anzivino for their hard work in collecting and organizing these proceedings

Confrontation Between Theories and Observations in Cosmology Jean Audouze,F. Melchiorri,1990 The latest developments in particle physics are inextricably linked to modern cosmology The main purpose of this Enrico Fermi school was to emphasise the complex interconnection between cosmology and particle physics on both the theoretical and experimental sides Unifying theories in high energy physics and inflationary models of the universe are therefore treated side by side The large scale structure of the universe is analysed by confronting recent observations with theoretical models The IRAS infrared surveys the measurements in the cosmic background radiation and the consequences of these for our understanding of the universe are extensively dealt with
