Robust and Online Large-Scale Optimization Ravindra K. Ahuja, Rolf H. Möhring, Christos D. Zaroliagis, 2009-10-21
Scheduled transportation networks give rise to very complex and large scale network optimization problems requiring innovative solution techniques and ideas from mathematical optimization and theoretical computer science. Examples of scheduled transportation include bus, ferry, airline, and railway networks, with the latter being a prime application domain that provides a fair amount of the most complex and largest instances of such optimization problems. Scheduled transport optimization deals with planning and scheduling problems over several time horizons, and substantial progress has been made for strategic planning and scheduling problems in all transportation domains. This state-of-the-art survey presents the outcome of an open call for contributions, asking for either research papers or state-of-the-art survey articles. We received 24 submissions that underwent two rounds of the standard peer review process, out of which 18 were finally accepted for publication. The volume is organized in four parts: Robustness and Recoverability, Robust Timetabling and Route Planning, Robust Planning Under Scarce Resources, and Online Planning, Delay and Disruption Management. Railway Signaling, 1927 **Railway Signaling and Communications**, 1927 *Rock Island Employes' Magazine*, 1914 **North Carolina Reports** North Carolina. Supreme Court, 1961. Cases argued and determined in the Supreme Court of North Carolina.

Train's Trust George Owen Baxter, 1925. A no-good thief takes on a job with a huge payout that he can't possibly resist. Steven Train is a thief who knows a thing or two about how to handle a firearm. One day he is approached by another crook named John Rainier to go on a manhunt. Train is wary at first, but when Rainier tells him there's a huge payout, he decides to take on the job. Rainier works for Patrick Comstock, a rich rancher looking for an honest man to go on a dangerous mission in hopes of finding his long-lost friend. Comstock's friend disappeared after losing all his earnings in oil stock investments that went bad. However, as luck would have it, one of the oil stocks bounced back and is now worth 50,000. Comstock needs Train to find his long-lost friend and give him his earnings. Train takes on the job with the intent of stealing the cash and splitting it with the no-good Rainier, but a snooping detective investigating a number of older crimes Train committed could ruin their best-laid plans. And to top it off, Train has an odd change of heart and decides that if Comstock enlists his help, he will double-cross Rainier and will instead faithfully carry out his mission to find the missing person and return to him his money.
