

The Classification of Burns

- **First-degree burns:** First-degree burns are the ones that affect only the epidermis, which is the outer layer of the skin. An example of this is a mild sunburn. There are very few cases of long-term tissue damage with first-degree burns. They usually cause pain and redness.
- **Second-degree burns:** Second-degree burns affect the epidermis as well as the dermis, which is the lower layer of the skin. These cause redness, swelling, pain, and blisters.
- **Third-degree burns:** Third-degree burns affect all the layers of the skin, including the fat layer situated beneath a human being's skin. Such burns cause damage to a patient's nerve endings, leading to numbness. The skin could appear leathery in these cases and could have a black, white, or brown hue.
