Complexity Thinking

An organization is a complex adaptive system (CAS), because it consists of parts (people) that form a system (organization), which shows complex behavior while it keeps adapting to a changing environment.

Faced with complexity, the traditional instinct of the practical manager has been to try to reduce the complexity through rules of thumb, standard operating procedures, and so on.
– Hugo Letiche, *Coherence in the Midst of Complexity*

Example of typical mistake:
Trying to control the future rather than discovering it.

You cannot control a complex system, but you have many options for guiding it.

Example of typical mistake:
Thinking about numbers and not about people.

$$2138^{10} = p + 3q^2 = (p - 3q^2)^{10} = (p - 3q)^{10} = p^{10} - 10p^9(3q) + \dots$$
