The New Energy:

Advanced Battery Management System for Electric Vehicles Shichun Yang, Xinhua Liu, Shen Li, Cheng Zhang, 2022-09-19
The battery management system BMS optimizes the efficiency of batteries under allowable conditions and prevents serious failure modes. This book focuses on critical BMS techniques such as battery modeling, estimation methods for state of charge, state of power, and state of health, battery charging strategies, active and passive balancing methods, and thermal management strategies during the entire lifecycle. It also introduces functional safety and security-related design for BMS and discusses potential future technologies like digital twin technology.

Battery Management Algorithm for Electric Vehicles Rui Xiong, 2019-09-23
This book systematically introduces readers to the core algorithms of battery management system BMS for electric vehicles. These algorithms cover most of the technical bottlenecks encountered in BMS applications, including battery system modeling, state of charge (SOC) and state of health (SOH) estimation, state of power (SOP) estimation, remaining useful life (RUL) prediction, heating at low temperature, and optimization of charging. The book not only presents these algorithms but also discusses their background as well as related experimental and hardware developments. The concise figures and program codes provided make the calculation process easy to follow and apply, while the results obtained are presented in a comparative way, allowing readers to intuitively grasp the characteristics of different algorithms. Given its scope, the book is intended for researchers, senior undergraduate and graduate students, as well as engineers in the fields of electric vehicles and energy storage.
