Indicators to monitor and evaluate the sustainability of bioeconomy Food and Agriculture Organization of the United Nations, 2019-11-06 FAO has been working for many years on non food biomass products including sustainable bioenergy and biotechnology and it received a mandate to coordinate international work on food first sustainable bioeconomy by 62 Ministers present at the Global Forum for Food and Agriculture GFFA 2015 Moreover FAO has received support from the Government of Germany to develop guidelines on sustainable bioeconomy development Phase 1 2016 Phase 2 2017 mid 2020 This involves work on the bioeconomy monitoring including the selection and use of indicators The ultimate aim of FAO s work on sustainability indicators is to provide technical assistance to

countries and stakeholders in developing and monitoring sustainable bioeconomy more particularly on identifying suitable indicators in line with the Sustainable Bioeconomy Aspirational Principles and related Criteria agreed upon in 2016 by the International Sustainable Bioeconomy Working Group created in the context of FAO's project on Sustainable Bioeconomy Guidelines. These indicators shall help both policy makers and producers/manufacturers in monitoring and evaluating the sustainability of their bioeconomy strategies and interventions. In order to cover all the relevant aspects and issues for a sustainable bioeconomy, our approach identifies impact categories from the sustainable bioeconomy principles and criteria. The monitoring approach suggested is balanced since it considers the three sustainability dimensions: social, economic, and environmental, at the same time it proposes to use a limited set of core indicators to keep the monitoring feasible and cost-effective. The suggested methodology starts with a review of existing monitoring approaches to identify already available indicators from which the authors

PLATE: Product Lifetimes And The Environment Conny A. Bakker, 2017-11-15

Product lifetimes are critical for the circular economy: resource efficiency, waste reduction, and low carbon strategies for sustainability, and are therefore of interest to academics from many different disciplines as well as original equipment manufacturers (OEMs) and other stakeholders. The challenges related to product lifetimes must be tackled from multiple perspectives, making the sharing of knowledge and expertise from different disciplines particularly important. This book presents papers from the second Product Lifetime and the Environment PLATE conference held in Delft, the Netherlands, in November 2017. The conference originated from the desire to bring together academic researchers working in the field of sustainability to benefit from each other's knowledge and further advance the field. The book includes the 88 full papers delivered at the conference, grouped according to the following 7 conference themes: design for product longevity, product lifetime optimization, cultural perspectives on the throwaway society, circular economy and product lifetimes, business opportunities, economic implications, and marketing strategies, consumer influences on product lifetimes, and policy regulation and legislation. The book will be of interest to all those concerned with sustainable consumption, circular economy, and resource efficiency.

Data Science, Challenges and Applications for Industrial Innovation and Sustainability Elena Barbadilla-Martín, Alicia Robles-Velasco, María Rodríguez-Palero, Pablo Cortés, 2026-02-02

This book collects a selection of papers presented at the 19th International Conference on Industrial Engineering and Industrial Management and XXIX Congreso de Ingeniería de Organización CIO2025 that took place on 3 and 4 July 2025 in Seville. The conference was hosted by the Asociación para el Desarrollo de la Ingeniería de Organización ADINGOR and was organized by the Universidad de Sevilla, Spain. Some of the topics covered in the proceedings book include Supply Chain Management and Logistics, Operations Research, Modelling and Simulation, Industry 5.0, and Management Information Systems, Robotics and Control in Industrial Engineering, Project and Process Management, Education in Industrial Engineering, Circular Economy, among others.

Positive Finance Hervé Guez,Philippe Zaouati,2017-09-08 For some finance is the enemy solely responsible for the global financial crisis and symbolic of an outdated model that is catapulting us toward social and ecological ruin Such a view can seem tempting The 2007 2008 meltdown of the financial system was intimately bound to the financialization of the economy and its consequences However in reality the crisis in finance is an indicator that our economic model is obsolete It is possible to imagine another way which would consist of seeing finance as a toolkit for building a solution to the crisis Positive Finance presents a way to transform the economic model and reduce the ever widening gulf of inequality while taking into account environmental constraints In order to achieve this the authors argue that we must re envision the allocation of capital in order to support social and technological innovations to design and build sustainable infrastructure and to finance the energy transition Reinvented finance could become a powerful lever for setting these transformations in motion This book is dedicated to proving that such leverage is within reach here the authors present a toolkit for putting money to work in the general interest **Proceedings** ,1980
