[Intermittent Diet for Women Over 50](#) Amy Ryan,Suzanne Ramos Hughes,2020-02-26 If you have ever felt

negatively towards your body or feed habits and you're over 50 then keep reading. It is essential for women as they approach middle age to start exercising necessary precautions with their health. This is the time where women become at risk for contracting diseases like type 2 diabetes, heart disease, cancer, and high blood pressure, to name a few. From this age, women need to pay considerable attention to what and how they eat. Healthy eating habits lower the risk of illness, reduce middle age spread, and slow down the signs of aging. As a person ages, they undergo certain phases of life where changes take place. We go from infant to toddler, we suffer puberty, adolescent years, become a young adult, and so on. Each decade implements some change in body and character as we learn, grow, and mature. Suddenly, before you realize it, you have hit your fifties and start to notice some things decline. Grey streaks sliver the hair, the skin is not as tight, and parts of the body are not as perky as they used to be. Fat forms and stubbornly will not move, especially around the belly area. Belly fat is a health concern and needs to be addressed. Once a woman is over the age of fifty, it gets exceedingly difficult to be rid of any fat, not only that around the belly. Intermittent fasting has been known to help get rid of stubborn fat. It may also slow down signs of aging, it may increase longevity, and reduce the risk of disease in middle-aged women. It helps to kick start the metabolism, increase energy, and vitality along with one's self-esteem.

It's almost impossible to hide from the news and discussion about the obesity epidemic that's taking both lives and shattering the quality of life world-wide. It's in the papers, on television, and being blogged about on the internet almost endlessly. If that's not enough, unless you're blind, it's hard to walk the streets of any big city or small town and not see the end product of this epidemic first-hand. The hard, brutal truth is that people are getting fatter and fatter, and this is a real health crisis that only a fool could ignore. The question stands: what can we do about it? How can we turn the tide against obesity? The answer is, of course, diet and exercise. There's plenty of diverse ideas about both, some good and a few bad. It's fairly simple and packed with power, inline with both nature and common sense. Most importantly, it works and works almost like magic.
