Advanced Data-Driven Uncertainty Optimization for Planning, Operation, and Analysis of Renewable Power Systems Lipeng Zhu, Minghao Wang, Cong Zhang, Zhenjia Lin, Ying Zhang, 2026-01-09

The rapid deployment of renewable energy systems in the grid is reshaping the energy structure and significantly impacting the operational stability and reliability of power systems. Renewable energies such as solar and wind pose significant challenges to the continuity and stability of power supply due to their variability and intermittency. To address these challenges, uncertainty analysis and optimization offer effective strategies to manage the uncertainties of renewable energy, thereby enhancing the resilience and stability of power systems. Traditional model-based approaches, while effective, will ultimately struggle to handle the ever-growing scale and various uncertainties of energy systems. The development of machine learning and data science has played a significant role in overcoming these difficulties. Data-driven approaches, freed from the limitations of traditional models, effectively complement model-driven uncertainty optimization methods. They demonstrate great potential in uncertainty analysis, operation, and optimization of power systems. The purpose of this research topic is to conduct uncertainty optimization, planning, and analysis of renewable energy power systems and investigate the application of data-driven methods in the uncertainty optimization of renewable energy power systems. This will ensure the secure, reliable, and efficient operation of power systems. We hope that this research topic will encompass the latest technologies in advanced data-driven uncertainty optimization methods for the planning, operation, and analysis of renewable energy power systems, promoting the development of renewable energy power systems towards greater intelligence, efficiency, and reliability. This Research Topic encourages the contributions of original research articles with new data, information, and findings, and comprehensive reviews on the advanced data-driven uncertainty optimization method for planning, operation, and analysis of renewable power systems and other relevant topics. Topics of interest for publication include, but are not limited to:

1. Advanced optimization methods for renewable energy power system planning
2. Uncertainty optimization techniques for the operation of renewable energy power systems
3. Risk assessment and early warning for renewable energy power system operation
4. Uncertainty analysis and computational methods for renewable energy systems
5. Energy storage optimization and planning considering stability and economics
6. Application of machine learning in power system optimal scheduling
7. Data-driven renewable energy generation and load demand forecasting
8. Uncertainty analysis and optimization of active distribution networks
9. Big data-based state monitoring of smart distribution networks
10. Machine learning-based fault diagnosis in power systems

Developing a Business Case for Renewable Energy at Airports Stephen B. Barrett,Philip M. DeVita,Julie E. Kenfield,Bradley T. Jacobsen,David Y. Bannard,2016 This report is a guidebook to help airports understand renewable energy opportunities The report includes instructions and tools to evaluate proposed renewable energy projects and their alternatives so that an informed decision that maximizes financial self sustainability environmental and social benefits can be reached The report lays out what a business case is why renewable energy is important and what a business case for renewable energy looks like It describes the importance of identifying the project objective and understanding how renewable energy might fit into an airport s vision A decision making matrix is included

that contains criteria used to evaluate a renewable energy project with a system for weighting each factor based on an airport's particular objectives. The report presents a business case in the context of an airport's typical master planning and capital improvement planning processes including engagement of key stakeholders. The report provides a model business case that evaluates a solar photovoltaic facility, a fossil fuel generator, and a fuel cell as options for providing on-site electricity generation to improve an airport's energy stability and resiliency. It also includes examples of renewable energy business cases from both aviation and non-aviation organizations to highlight lessons learned. A sample request for proposals and a sample power purchase agreement are provided for project implementation. A CD-ROM (CRP CD 177) provides supplemental information.
