The Larger Message:

Investigator's Guide to Steganography Gregory Kipper, 2003-10-27 The Investigator's Guide to Steganography provides a comprehensive look at this unique form of hidden communication from its beginnings to modern uses. It begins by exploring the past, providing insight into how this steganography began and evolved from ancient times to present day. It continues with an in-depth look at the workings of digital steganography and watermarking methods, available tools on the Internet, and the companies who are providing cutting edge steganography and watermarking services. The third section outlines real world uses of steganography. The book concludes by reviewing steganography detection methods and what can be expected in the future.

Recent Advances in Parallel Virtual Machine and Message Passing Interface Jack Dongarra, Emilio Luque, Tomas Margalef, 2003-07-31 Parallel Virtual Machine (PVM) and Message Passing Interface (MPI) are the most frequently used tools for programming according to the message passing paradigm, which is considered one of the best ways to develop parallel applications. This volume comprises 67 revised contributions presented at the Sixth European PVM MPI Users Group Meeting, which was held in Barcelona, Spain, 26-29 September 1999. The conference was organized by the Computer Science Department of the Universitat Autònoma de Barcelona. This conference has been previously held in Liverpool, UK, 1998 and Cracow, Poland, 1997. The first three conferences were devoted to PVM and were held at the TU Munich, Germany, 1996; ENS Lyon, France, 1995; and University of Rome, 1994. This conference has become a forum for users and developers of PVM, MPI, and other message passing environments. Interaction between those groups has proved to be very useful for developing new ideas in parallel computing and for applying some of those already existent to new practical fields.

Parental Belief Systems Irving E. Sigel, Ann V. McGillicuddy-DeLisi, Jacqueline J. Goodnow, 2014-02-25 Research on the topic of parent beliefs or parent cognition has increased tremendously since the original publication of this volume in 1985. For this revised second edition, the editors sought to reflect some of the new directions that research on parent cognition has taken. By offering a greater variety of topics, it gives evidence of the intellectual concerns that now engage researchers in the field and testifies to the expanding scope of their interests. Although a unique collection because it reflects the diversity that exists among major researchers in the field, it evinces a common theme: that the ideas parents have regarding their children and themselves as parents have an impact on their actions. This emphasis on parents' ideas shifts the focus on sources of family influence to ideas or beliefs as determinants of family interactions. The implication of this way of thinking for practitioners is that it suggests the shift to ideas and thoughts from behavior and attitudes.

[Computational Science - ICCS 2002](#) Peter M.A. Sloot, C.J. Kenneth Tan, Jack J. Dongarra, Alfons G. Hoekstra, 2003-08-01
Computational Science is the scientific discipline that aims at the development and understanding of new computational methods and techniques to model and simulate complex systems. The area of application includes natural systems such as biology, environmental and geo-sciences, physics, and chemistry, and synthetic systems such as electronics and financial and economic systems. The discipline is a bridge between classical computer science, logic, complexity, architecture, algorithms, mathematics, and the use of computers in the aforementioned areas. The relevance for society stems from the numerous challenges that exist in the various science and engineering disciplines which can be tackled by advances made in this field. For instance, new models and methods to study environmental issues like the quality of air, water, and soil, and weather and climate predictions through simulations, as well as the simulation-supported development of cars, airplanes, and medical and transport systems, etc.

Paraphrasing R. Kenway: R.D. Kenway, *Contemporary Physics*, 1994. There is an important message to scientists, politicians, and industrialists: in the future, science, the best industrial design and manufacture, the greatest medical progress, and the most accurate environmental monitoring and forecasting will be done by countries that most rapidly exploit the full potential of computational science. Nowadays, we have access to high-end computer architectures and a large range of computing environments, mainly as a consequence of the enormous stimulus from the various international programs on advanced computing, e.g.
