results from the dissolution of rocks and mineral substrates by microbial mechanical and chemical processes The application
of microorganisms in biomining is a biotechnological approach that involves extracting and recovering metals from ores
Microorganisms interact with minerals to colonize and exploit habitats and demonstrate the capacity to scavenge critical
elements with low bioavailability such as iron and phosphorus There is an ongoing need to improve soil fertility and crop
production particularly in dry places to remediate toxic soils and clean stone artworks and structures A complete
understanding of microorganisms mediated mineral weathering processes may provide a significant opportunity for
researchers to develop novel solutions to overcome challenges in agriculture the environment and industry *Notes on*
