Water And Life:

Water and Life: Life in Water and Water in Life Arieh Ben-Naim, Zvi Kirson, Jose Angel Sordo, 2021-03-16 This book is unique in presenting all aspects of water. It includes discussion of the theory of a water molecule, its properties both in the pure state and as a solvent. In particular, it emphasizes the relevance of water to life. Water is the most important liquid. It is also a vital component of all living systems. It has very unusual properties which makes it the most interesting for research and study.

Water Communication Celine Herve-Bazin, 2014-04-14 Water Communication aims at setting a first general outlook at what communication on water means, who communicates and on what topics. Through different examples and based on different research and contributions, this book presents an original first overview of water communication. It sets its academic value as one distinct scientific domain and provides tips and practical tools to professionals. The book contributes to avoid mixing messages, targets and discourses when setting communication related to water issues. The book facilitates coordination within the water sector and its organizations as water is a wide field of applications where inadequate words and language understanding between its stakeholders is one of the main obstacles today. Water Communication provides and describes a general outlook and retrospective of the history of the water sector in terms of communication, the landscape of organizations communicating on water and classification of topics, the differences between communication, information, mediation, raising awareness, examples of communication campaigns on water. Water Communication is a vital resource for communication managers, utility managers, policy makers involved in water management and students in water sciences and environment. Colour figures from the book are available to view on the WaterWiki at <http://www.iwaterwiki.org/xwiki/bin/view/Articles/WaterCommunicationAnalysisofStrategiesandCampaignsfromtheWaterSector>. Editor: Celine Herve Bazin, Celsa Sorbonne University, Paris, France.

Life's Matrix Philip Ball, 2001 In *Life's Matrix*, Philip Ball writes of water's origins, history and unique physical character. His provocative exploration of water on other planets highlights the possibilities of life beyond Earth. It also examines the grim realities of depletion of natural resources and its effects on the availability of water in the 21st century. Illustrations.

Paradigms and Theories Influencing Policies in the South African and International Water Sectors Richard Meissner, 2016-11-12 This book presents a new way of looking at and analyzing policies, programs and/or plans in which research scientists have used their knowledge to develop mechanisms such as South Africa's National Water Resource Strategy. Second Edition. Australian and South African climate change adaptation strategies for government entities and the UNDP's Water and Ocean Governance focus area. It critically assesses how science can be used in the service of society and how researchers and practitioners can bridge the gaps that arise as a result of incomplete thinking. Presenting a bird's eye view of how thinking and understanding operate in the policy context, it offers a valuable contribution to fields of inquiry such as research methods, comparative analyses, political science, international relations and the natural and social sciences in general. This book fills a market gap providing real world solutions to the practical application of science.
