Organic Farming Great Britain. Parliament. House of Commons. Agriculture Committee, Agriculture Committee, David Curry, 2001 This Agriculture Committee report is concerned with finding answers to the technical problem of how to increase UK production of organic food to meet the existing rising demand and with the question of appropriate Government support for organic farming It is not concerned with the promotion of organic farming as a public good The report examines and makes recommendations on the expansion of organic farming and the demand for organically produced foods in the UK the supply chain and the role of supermarkets and producer owned co operatives the system for certifying organic products and for setting standards the role of Government in supporting organic farming through direct financial assistance and through indirect means such as research and development or training The Committee has reservations about the claims made for organics and recommends that that claims can be tested and verified in order that consumers really know what they are buying Clear standards are necessary The Committee regards it as critical that supermarkets which will be the main distribution channel for organic produce are involved in the design of and are encouraged to co fund future initiatives to further organic conversion The report stresses the need for organic and

conventional agriculture to be interdependent it being unlikely that organic farming can ever provide the amount of food needed for the whole country The best of both techniques should be used to ensure the greatest benefits for farmers consumers and the wider community The Committee views it as essential that before determining how best to offer financial assistance the Government should be clear as to the rationale for doing so and the objectives it wishes to achieve through this expenditure These objectives must be tightly defined and made public Finally the report states that the Committee is not in favour of a dirigiste approach to agriculture in the UK Agriculture must respond to the market place and farmers need to adopt clear plans that will allow it to do so particularly the organic sector The past perhaps belonged to messianics the future belongs to marketing The Best Of-- Exploring Sustainable Alternatives Canadian Centre for Sustainable Agriculture,2001

jan 26 2020 optimization modelling is one the most practical and widely used tools to find optimal or near optimal solutions to complex decision making problems optimization modelling most of the

about pyomo - Jul 18 2022

pyomo is a python based open source software package that supports a diverse set of optimization capabilities for formulating solving and analyzing optimization models a core capability of pyomo is modeling structured optimization applications
