Eliel, Samuel H. Wilen, Norman L. Allinger, 2009-09-17 This seminal series first edited by Ernest Eliel responsible for some of the major advances in stereochemistry and the winner of the ACS Priestley Medal in 1996 provides coverage of the major developments of the field of stereochemistry The scope of this series is broadly defined to encompass all fields of chemical and biological sciences that are founded on molecular and supramolecular interactions Insofar as chemical physical and biological properties are determined by molecular shape and structure the importance of stereochemistry is fundamental to and consequential for all natural sciences *Topics in Stereochemistry* serves as a multidisciplinary series that enriches all of chemistry Aimed at advanced students university professors and teachers as well as researchers in pharmaceutical agricultural biotechnological polymer materials and fine chemical industries *Topics in Stereochemistry* publishes definitive and scholarly reviews in stereochemistry and has long been recognized as the gold standard reference work in this field Covering the effect of chirality on all aspects of molecular interaction from the fundamental physical chemical properties of molecules and their molecular physics to the application of chirality in new areas such as its applications in materials science *Topics in Stereochemistry* explores a wide variety of properties both physical and chemical of isomers with a view to their applications in a number of disciplines from biochemistry to materials science [Conformational Analysis of Molecules in Excited States](#) Jacek Waluk, 2000-06-13 A unique look at some of the hottest topics in photophysics and photochemistry today The study of molecules in excited states has exploded over the past decade providing new insights into conformational changes in organic molecules and opening up research opportunities for scientists and professionals in chemistry physics biology medicine and materials engineering Using conformational analysis as a unifying concept this important new work provides readers with a cohesive and cutting edge overview of this fascinating and challenging field From conformational changes accompanying photoinduced electron transfer to elementary photophysical and photochemical processes in living systems the most representative and challenging topics are carefully gleaned from the vast literature highlighting major conceptual problems along with the relevant experimental techniques Authoritative detailed contributions from both experimentalists and theoreticians include coverage of Conformational changes in intramolecular excited state electron transfer Conformational aspects of excited state proton transfer The novel topic of solute solvent friction in chemical reactions Mechanisms and structural aspects of exciplex formations Conformational aspects of organic photochemistry Calculations of excited state conformational properties **Bioproducts** A.
